

# e-IRGSP5

## Deliverable

### D5.2. Updated Communication Plan

Planned Delivery Date:	2017-11-30
Actual Delivery Date	2017-11-30
Dissemination level	Public
Work Package:	WP5
Lead partner:	Genias
Document status:	Final 2.0 (2017-11-30)

Copyright © 2017 Members of the e-IRGSP5 Project.

The e-IRGSP5 (“e-IRG Support Programme 5”) project is funded by the European Union. For more information on the project please see the website <http://e-IRGSP5.e-irg.eu>

e-IRGSP5 MAKES NO WARRANTIES, EXPRESS, IMPLIED, OR STATUTORY, BY PUBLISHING THIS DOCUMENT.

### About this document

This document is deliverable 5.2 *Updated Communication plan*.

The deliverable D5.2 starts with an inventory of the activities we did during the first project period. It evaluates how the communication plan presented in deliverable 5.1 *Initial Communication plan* did actually work out. We include metrics.

The deliverable contains an updated version of both the strategic and operational communication plan. The communication plan includes the plan for the stakeholder liaison and the plan for dissemination and exploitation of results.

# 1 Communication Planning

## *1.1 The importance of planning*

When communicating about a topic or organisation, one always wants to do more, and better. There are always better ways of communicating and disseminating about a project like e-IRGSP5 and an organisation like e-IRG it seems. However, there is a major constraint to doing more, and that is money. There is a limited budget available for communication. This means that careful planning is needed to design the most effective means of communication targeted towards the communication objectives. A carefully designed set of actions that use money and resources in an effective way. Actions that are evaluated for their effectiveness. To this end we start with Strategic and Operational Communication plans at the beginning of the project.

## *1.2 Where this deliverable fits in*

In the previous deliverable, D5.1. Initial Communication Plan, we set out the global communication strategy for both e-IRG and e-IRGSP5, by defining a Global Communication plan. In addition, we defined an Operational Communication plan with the activities we did plan for the first project year. In this deliverable, we evaluate the results of the communication activities during the first year. We use this evaluation as basis for next year's Operational Plan. We also look at the necessity to have changes to the Global Communication plan. In the final deliverable, D5.3, we will evaluate the results of the communication activities during the whole project.

This deliverable also contains the current Plan for the Dissemination and Exploitation of results. The Final version will be confidential and hence be part of the final periodic report, not of D5.3.

## *1.3 Notes on content duplication*

The Communication and Dissemination plans that we describe in here, are intended to be used by the project as guidance throughout the second project year. Some parts, however, have not changed. For reasons of completeness we do include these here to. But we indicate at the beginning of the section, that it has been described also in D5.1. This allows a reader who is acquainted with D5.1 to safely skip these sections.

## 2 Communication activities during the 1<sup>st</sup> project period

### 2.1 Introduction

In this chapter we give details on the communication activities we did during the first period. We also give metrics on usage and access.

We start with the developments of the portal which is the backbone of our communication strategy. We then continue with a description of the stakeholder liaison activities.

Support for e-IRG publications is an important activity. Publications are a major outcome of the e-IRG and need proper graphic design and distribution.

In this visual age, videos are becoming more and more important. But for those who prefer reading, we have our biannual Newsletter and a Newsblog and some other social media activities.

We conclude this chapter with discussion of the persistent identifier system that we implemented for official e-IRG publications.

### 2.2 Portal

The portal attracted on average some 10.000 unique visitors (urls) per month based on the analysis of the log files of the web server.

#### 2.2.1 The e-IRG portal

The e-IRG portal is the main entry for people with an interest in e-IRG activities. The web site has been maintained and is regularly updated.

#### Highlights

A special web page to support the development of the Roadmap document has been set up and is regularly being updated at: <http://e-irg.eu/roadmap>.

A web page to support the development of the KPI document has been set up and is regularly being updated at: <http://e-irg.eu/kpi>

The newsblog has been updated biweekly.

The meet-up events are regularly updated.

The e-IRG workshop information is regularly updated. Presentation slides from the speakers have been uploaded. The

presentation recordings are also available on the vimeo channel, as well as on the workshop's programme webpage.

An updated flyer is available at <http://e-irg.eu/documents/I0920/283008/Flyer.pdf>. A special flyer for the RICH event has been created.

An updated general presentation, including Roadmap info, new presidencies, etc. is available at

<http://e-irg.eu/documents/I0920/283008/General+e-IRG+Presentation.pdf>

#### Numbers

Some access numbers that give an impression of the usage of the portal:

18.000 unique visitors to the website in the month of October 2017;

450 unique visitors to the Roadmap page in February 2017. (Press release roadmap was in January).

640 downloads of the general e-IRG presentation (all time cumulative).

## 2.2.2 The e-IRG delegates space

The internal delegates website has updated information on upcoming and past e-IRG and ESFRI events, current and former e-IRG Board members and meetings, e-IRG delegate members, meetings and nomination dates. In this working space we also added a new section to support the e-IRG PREDAT working group, and for the joined eInfraCentral/e-IRGSP5 working group on KPIs.

## 2.2.3 The e-IRGSP5 website

An e-IRGSP5 external website at <http://e-irgsp5.e-irg.eu/> and an e-IRGSP5 internal website at <http://intranet.e-irgsp5.e-irg.eu/> have been produced. The internal website is the intranet for the e-IRGSP5 project team. The contents is mainly produced by WP2, Secretariat.

An updated e-IRGSP5 dissemination list is available at: <http://e-irgsp5.e-irg.eu/dissemination>. This list contains all dissemination activities, not only for e-IRGSP5 but for e-IRG too.

An action list has been created at: <http://intranet.e-irgsp5.e-irg.eu/action-list>

The e-IRGSP5 partners can now produce action lists for each person and work package.

A calendar has been set up at <http://intranet.e-irgsp5.e-irg.eu/calendar> as well as a link to subscribe to the calendar at <http://intranet.e-irgsp5.e-irg.eu/subscribe-to-e-irgsp5-calendar>

The agenda items and minutes of the telco meetings are kept up to date at <http://intranet.e-irgsp5.e-irg.eu/telcos>

A tool for KPI classification has been developed and is available at: <http://intranet.e-irgsp5.e-irg.eu/kpi>

Persistent identifiers (PIDs) have been developed for the official e-IRG publications. The proposal

can be found at:  
<http://e-irgsp5.e-irg.eu/documents/325162/363451/PIDfore-IRG.pdf>

There are official professional templates for e-IRG and for e-IRGSP5 presentations available on the Intranet in the WP5 documents library.

There are a number of slides in the standard slide sets that can be used and adapted for use in presentations related to e-IRG.

## 2.3 Participation and Liaison with stakeholders

We had some 20 events and meetings where we talked or discussed with stakeholders.

Interaction with stakeholders in the e-Infrastructures, Research Infrastructures and HPC communities. In many events the e-IRG chair, or an e-IRG delegate, represented the e-IRG. At other events, e-IRSP5 partners participated.

### 2.3.1 Participation in events

- SURFsara Super D event, December 15, 2016 in Amsterdam, The Netherlands

From this event, a video-interview with Siewert-Jan Marrink, Professor of Molecular Dynamics at the University of Groningen titled “Computational microscopy needs big supercomputers to study secrets of self-organising cell membranes” has been made available on the newsblog.

- Workshop on EuroHPC Governance at Digital Day 2017, March 23, 2017 in Rome, Italy

e-IRG Chair Prof. Dr.-Ing. Gabriele von Voigt was present at the official signing of the EuroHPC declaration and at the workshop on EuroHPC governance.

- BOF session on Data Infrastructure Assessment at the Research Data

Alliance’s 9<sup>th</sup> Plenary Meeting, April 5-7, 2017 in Barcelona, Spain

Following the publication of the e-IRG document “**Evaluation of e-Infrastructures and the development of related Key Performance Indicators**”, also known as the KPI document, the support project of the e-Infrastructure Reflection Group (e-IRG) organised a Birds-of-a-Feather (BOF) session at the Research Data Alliance (RDA) 9th Plenary Meeting in Barcelona, Spain, on April 7, 2017 from 11h00 to 12h30.

<https://www.rd-alliance.org/data-infrastructure-assessment-rda-9th-plenary-bof-meeting>

- Second RICH Symposium, May 8, 2017 in Lisbon, Portugal

The e-IRG presentation by Chair Prof. Dr.-Ing. Gabriele von Voigt at the RICH 2017 symposium has been uploaded to the Vimeo channel at <https://vimeo.com/216531124>

The slides have been made available on the website.

A flyer has been produced to the RICH event: <http://e-irgsp5.e-irg.eu/documents/325162/341993/Flyerv4.2.pdf>

Unfortunately the courier did not deliver the printed versions in time for the event itself.

- European HPC Summit Week 2017 including PRACEdays 2017, May 15-19, 2017 in Barcelona, Spain

This event was attended by e-IRGSP5 partner Todor Gurov, Assoc. Prof., PhD, Deputy Director at the Institute of Information and Communication Technologies, Bulgarian Academy of Sciences. He wrote a summary for the newsblog: **Impressions from the European HPC Summit Week 2017 in Barcelona, Spain.**

- Terena Networking Conference – TNC17, May 29-June 2, 2017 in Linz, Austria

Jan Wiebelitz from the Leibniz Universität Hannover and Ilse Koning from SURF attended the event.

- 32<sup>nd</sup> ISC High Performance Conference - ISC’17, June 18-22, 2017 in Frankfurt, Germany, including ETP4HPC Workshop

At the ETP4HPC Workshop, eight organizers and participants were interviewed. The interviews appear on the e-IRG newsblog. The video films are included.

- Open Science FAIR 2017, September 6-8, 2017 in Athens, Greece
- 10<sup>th</sup> Research Data Alliance Plenary Meeting, September 19-21, 2017 in Montréal, Canada

Fotis Karayannis from Uranus Computing Ltd. attended the meeting.

- Digital Infrastructures for Research 2017 – DI4R 2017, November 30-December 1, 2017 in Brussels, Belgium

Many e-IRG delegates and e-IRGSP5 partners are present at this event.

### 2.3.2 Liaison with specific stakeholder communities

- ESFRI Roadmap 2018 Info Day, January 17, 2017 in Malaga, Spain

Former e-IRG Chair Sverker Holmgren and current e-IRG Chair Prof. Dr.-Ing. Gabriele von Voigt attended the Info Day.

A video of Sverker Holmgren's presentation on e-Infrastructures in Europe is available at the vimeo channel at <https://vimeo.com/199866600>

- Science Europe: Cross-border Collaboration and Portfolio Management of Research Infrastructures, January 31, 2017 in Dublin, Ireland

Sverker Holmgren gave a talk on e-Infrastructures experience with cross-border collaboration.

- European Open Science Cloud Summit, June 12, 2017 in Brussels, Belgium

The statement by e-IRG Chair Prof. Dr.-Ing. Gabriele von Voigt about the e-IRG commitment to the European Open Science Cloud has been uploaded to the Vimeo channel at <https://vimeo.com/221597281>

- Joint eInfraCentral/e-IRGSP5 Technical Meeting on KPIs, September 28, 2017 in Brussels, Belgium

e-IRGSP5 and eInfraCentral had a discussion showing a convergence in the research subjects of both projects.

Topics under common interest are: categorization, metrics, taxonomy, ontology, assisting tools, automation, data exchange formats, etc.

It was decided to create a collaborative group which will consist of members originating from both projects and tasks were defined for the first period. The tentative working group name is "e-Infra KPIs".

- Second EOSCpilot Governance Development Forum Workshop, October 2-3, 2017 in Tallinn, Estonia

This event preceded the e-IRG Workshop so many participants attended both events.

e-IRG Delegate Arjen van Rijn held a presentation titled "e-IRG Infrastructure Commons interoperability and integration - lessons learnt",

available in the download menu at the e-IRG website.

- European Open Science Cloud - Bridging the gap between H2020 and ESIF at European Week of Regions and Cities, October 10, 2017 in Brussels, Belgium

e-IRG Chair Prof. Dr.-Ing. Gabriele von Voigt attended the event.

- ELIXIR TrCG - TeCG F2F Meeting, October 11-13, 2017 in Paris, France

Ad Emmen from Genias Benelux held a remote presentation titled "Collecting and presenting e-Infrastructure policy KPIs" available in the download menu at the e-IRG website.

- First EOSCpilot Stakeholder Forum, Brussels, Belgium, November 28-29, 2017 in Brussels, Belgium

Many e-IRG delegates and e-IRGSP5 partners are present at this event.

## 2.4 Supporting official e-IRG publications

e-IRG documents are major outcomes of the e-IRG work. We support the production process. The following e-IRG documents have been published:

- Roadmap 2016

We issued a press release about the official publication of the e-IRG 2016 Roadmap. The press release for the Roadmap and its distribution are available at: <http://e-irg.eu/news-blog/-/blogs/e-irg-to-publish-roadmap-2016-as-a-next-step-towards-the-e-infrastructure-commons>

This News blog item was viewed over 10.000 times. We translated the e-IRG 2016 Roadmap press release in Dutch for local dissemination purposes. It has been distributed by NWO. The press release has also been sent to the update e-mail list.

These actions led to an increase in the number of downloads of the Roadmap by 1.500. The number of total cumulative number of downloads is now over 3.000.

The press release has been viewed online over 10.000 times. Text versions have been downloaded 600 times.

- Guide to e-Infrastructure requirements for European Research Infrastructures: An e-IRG support document.
- Evaluation of e-Infrastructures and the development of related Key Performance Indicators.

## 2.5 Newsletters

Two newsletters have been published in May 2017 and in November 2017.

The Spring 2017 Newsletter has been downloaded over 2.000 times.

## 2.6 YouTube and Vimeo Video channels

The total number of interviews published during the first project period is more than 25. The total number of published video recordings of presentations is about 35.

Four video interviews have been released following the 4<sup>th</sup> National eScience Symposium in Amsterdam, The Netherlands, October 2016:

**Health-RI initiative to federate medical metadata across nationwide infrastructure** with Ronald Stolk, Director of Research Data and Biobanking at the Medical Center at the University of Groningen.

**Strong collaboration between digital technology experts and scientific researchers is paramount** with Wilco Hazeleger, the organizer of the event and also responsible for the Netherlands eScience Center.

**Square Kilometre Array data crunching will require compute power beyond Moore's Law**

with Chris Broekema, researcher in high performance computing at ASTRON.

**Funding agencies and academia need to rethink reward structure for computational tool developers to tackle big scientific challenges** with Fernando Pérez, University of California.

Two video interviews have been released following the DI4R 2016 Fall Conference in Krakow, Poland:

**OpenAire to support more technical e-Infrastructures with Open Research Data guidelines, publication and training** with Natalia Manola from the OpenAire project and infrastructure.

**CEO Steve Cotter elaborates on GEANT's backbone infrastructure, service deployment and KPI development** with Steve Cotter, the former CEO of GEANT.

After the e-IRG Workshop in Bratislava, Slovak Republic, November 15-16, 2016, 13 video presentations have been uploaded at <https://vimeo.com/album/4322392>

Six video interviews have been released after the e-IRG Workshop in Bratislava, Slovak Republic:

**GEDE urges e-IRG to raise their voice in discussion about service-oriented support for research infrastructures and Persistent Identifiers** with Peter Wittenburg, Executive Director of the

Research Data Alliance Europe and Senior Data Systems Advisor at the Max Planck Compute and Data Facility.

**RDA's active data management and e-IRG's high level infrastructure policy might yield promising collaboration** with Mark Parsons, Secretary General of the Research Data Alliance (RDA).

**Photon and Neutron Community ready to act as a go-between for the e-Infrastructures and user communities** with Andy Götz, European Synchrotron Radiation Facility (ESRF).

**Bridging socio-cultural distance in science through technical community-engaging mechanisms** with Dr. Dimitrios Koureas, Natural History Museum in London and coordinator of the Distributed System of Scientific Collections (DiSSCo).

**Former and new e-IRG Chair to discuss need to intensify collaborations with Research Data Alliance, ESFRI and European Commission** with former e-IRG Chair Sverker Holmgren and the new e-IRG Chair as of January 2017, Prof. Dr.-Ing. Gabriele von Voigt.

**Erik Fledderus highlights importance of ongoing dialogue and role of national nodes in realising e-IRG Roadmap 2016 vision** with Erik Fledderus, Chair of the working group responsible for the new edition of the e-IRG Roadmap.

After the e-IRG Workshop in St. Paul's Bay, Malta, June 8-9, 2017, 21 video presentations have been uploaded at <https://vimeo.com/album/4685410>

Three video interviews have been released after the e-IRG Workshop in St. Paul's Bay, Malta:

**Exciting times for the European citizen: EuroHPC plans two exascale machines by 2024-2025** with Dr. Juan Miguel González-Aranda, e-IRG Delegate for Spain, Interim LifeWatch ERIC Chief Technology Officer and Deputy of the Directorate-General for International Relations at the Ministry of Economy.

**New Belgian Delegate Chris De Loof believes in driving role for e-IRG for process of converging research infrastructures** with Chris De Loof, ICT advisor at the Belgian Science Policy Office and e-IRG Delegate for Belgium.

**ELIXIR is working hard trying to find a common Key Performance Indicator vocabulary between research infrastructures** with Rafael Jimenez, Chief Technical Officer (CTO) of the ELIXIR infrastructure.

The live streaming at the e-IRG Workshop in Tallinn, Estonia, October 3-4, 2017, has been followed by 60 individual persons during the first day.

The live streaming page has been accessed 475 times during the event.

Unedited recordings of the presentations at the Tallinn e-IRG Workshop are available. They will be processed and uploaded in the near future.

Three video interviews have been performed at the e-IRG Workshop in Tallinn, Estonia. All three will be published in the near future.

## 2.7 Knowledge Base

Lots of changes and updates have been made, such as the inclusion of videos, links to Research Infrastructures, and page layout.

The project pages have been updated. They now also include projects that recently started, cf. <http://knowledgebase.e-irg.eu/projects>

Projects that are derived from the calls EINFRA, INFRASUPP, INFRADEV, and INFRAIA now have "e-Infrastructure" in "Application Areas" on the right.

Projects from FETHPC, of importance to EuroHPC have "HPC" in that field. For instance the project "Mont-Blanc 3".

There are no Research Infrastructure projects included.

The following documents have been added:

- European Open Science Cloud
- <http://knowledgebase.e-irg.eu/documents/243153/246094/Report+on+the+governance+and+financial+schemes+for+the+European+Open+Science+Cloud.pdf>
- Open Access Publishing: <http://knowledgebase.e-irg.eu/documents/243153/246094/Recommendations+on+Open+Science+Publishing.pdf>

- Progress of OSPP
- <http://knowledgebase.e-irg.eu/documents/243153/246094/Any+other+Business+Point+on+Open+Science.pdf>
- Some technical notes on the Knowledge Base have been put in an internal background document available at: <http://e-irgsp5.e-irg.eu/documents/325162/379237/KnowledgeBaseTechV1p6.pdf>

Keeping the Knowledge Base up to date requires continuous effort. Because we are aggregating information from many sources, it is inevitable that we sometimes lag behind. For instance we get our project data from the European Open Data Portal. This can easily lag 6 months behind data already available on Cordis. However, the (XML) formats available from the Open Data Portal are much easier to use than those scraped directly from Cordis.

## 2.8 Social media

Twitter has been used on a regular basis to comment during events. We refer to the dissemination list in Appendix A for multiple examples.

LinkedIn is used to announce video-interviews, publications and events. We refer to the dissemination list in Appendix A for concrete examples.

The e-IRG newsblog has bi-weekly articles on current developments and news with regard to e-Infrastructures, the European Open Science Cloud, publication of official e-IRG documents, event announcements, and interviews.

### 2.8.1 Vimeo Analysis

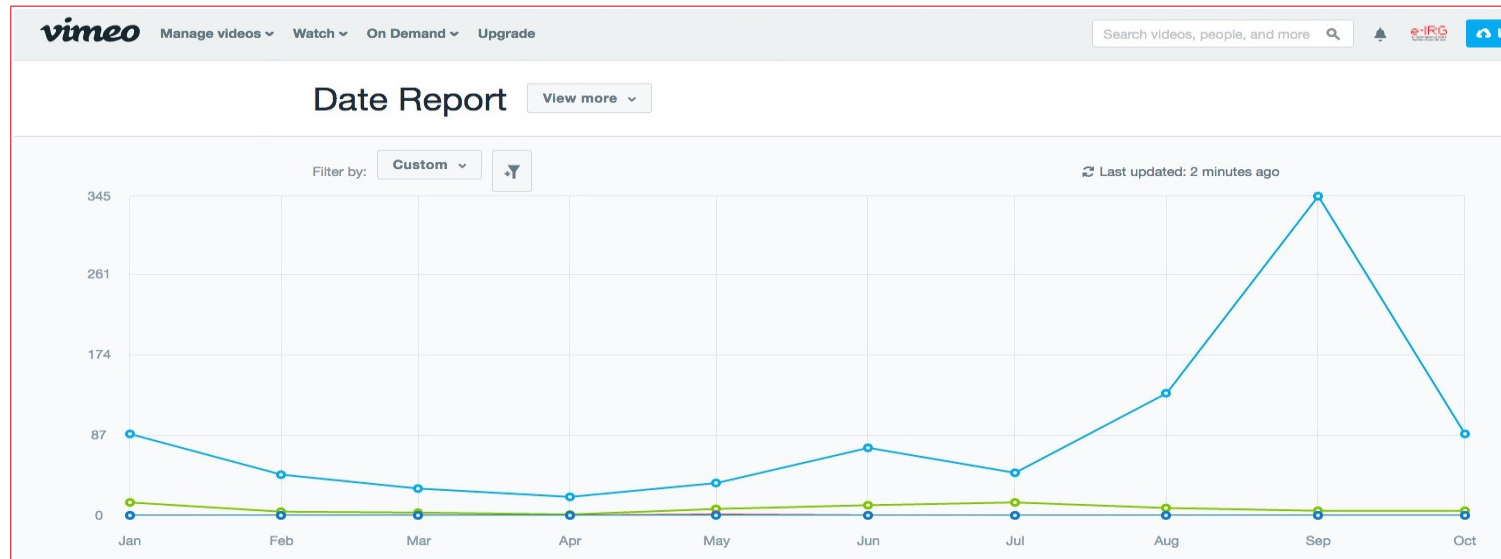

The Vimeo statistics show views per month. These vary greatly during the year. Most of the content is published in short time periods.

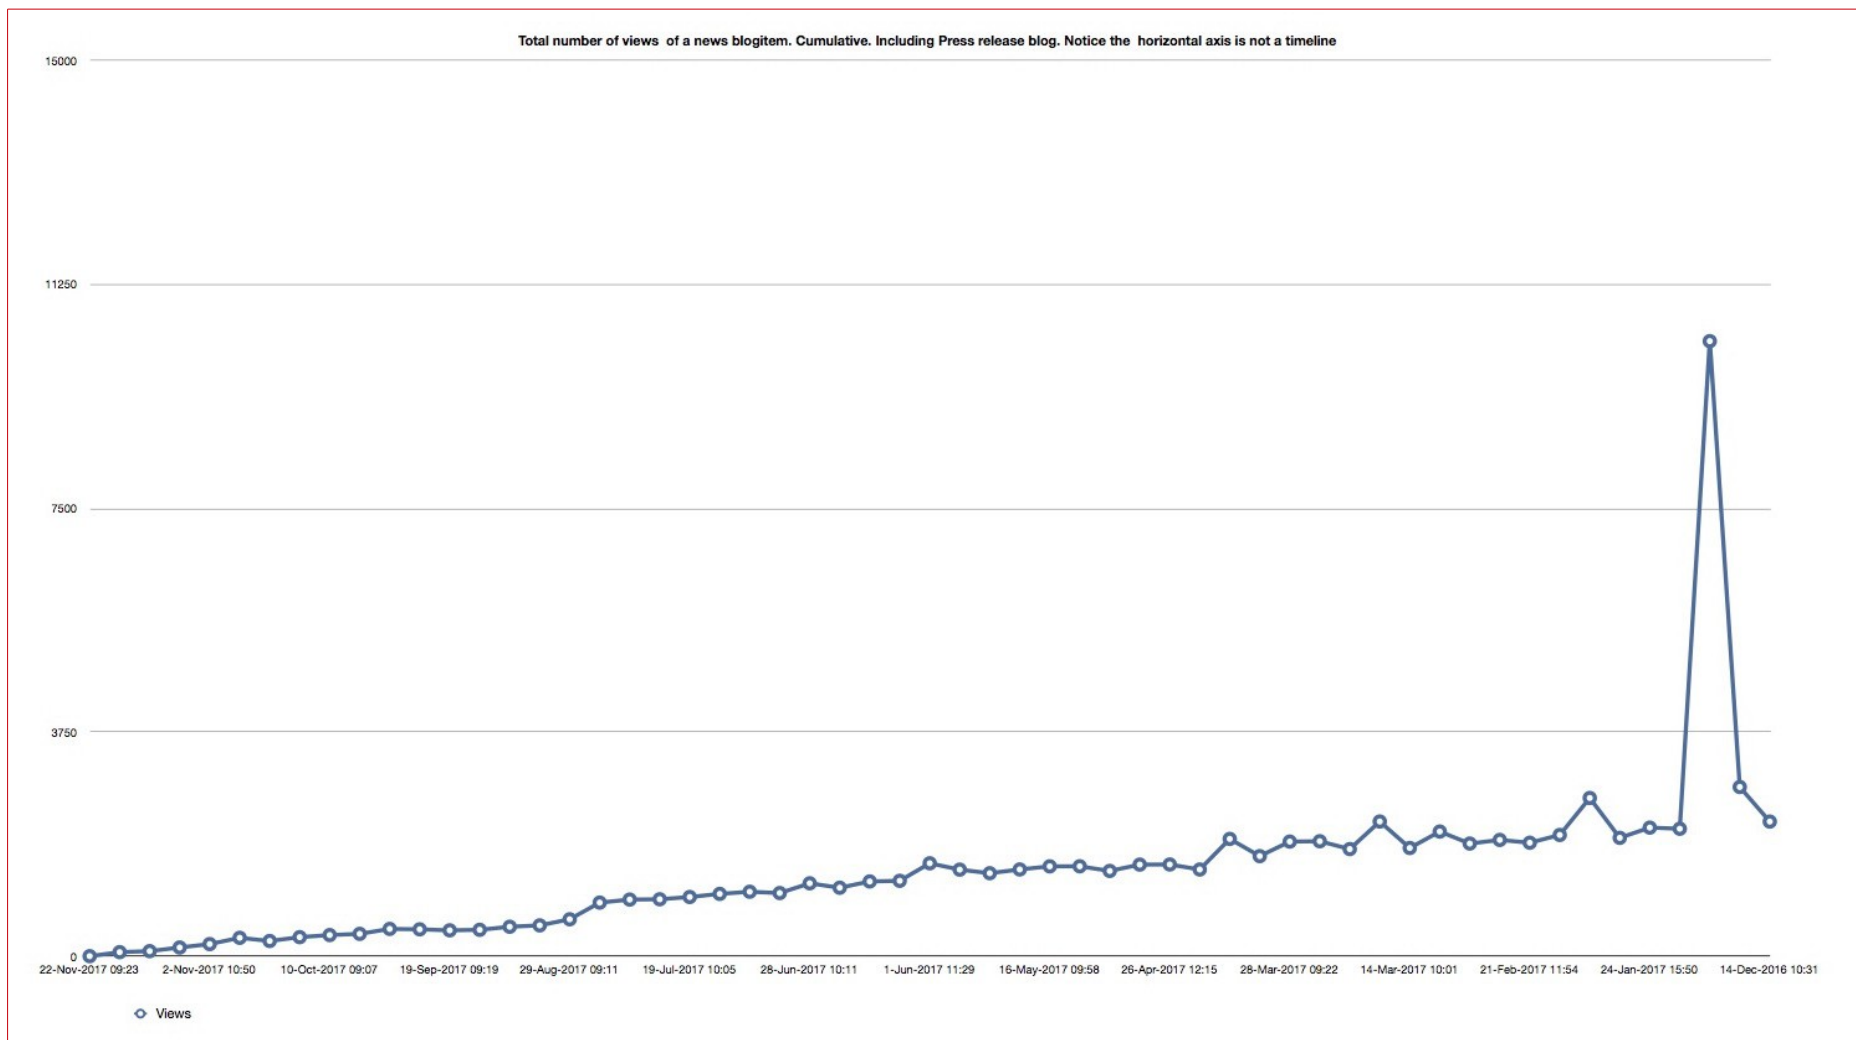

### 2.8.2 Newsblog analysis

On November 23, we looked at the total number of views that a News blog had until that date. Of course, older newsblogs tend to have more views collected than newer ones. Our first analysis (see graph) showed that one blog *Press Release: e-IRG publishes Roadmap 2016 as a next step towards the e-Infrastructure Commons* published on January 11<sup>th</sup>

had a very high number of views (10.296). This is very good, because it was an important release. Starting the analysis a bit later and thus excluding that

point allowed us to do a trend analysis, showing also for other news blogs how they performed in number of views.

## 2.9 Persistent Identifiers for e-IRG documents

For e-IRG documents we use ISBN numbers as Persistent Identifier (PID). For publications this is the most widely used system: ISBN - International Standard Book Number. Each publication can get an ISBN number that is also mentioned inside the publication. Because each unique publication has a unique ISBN number, it can be used to persistently and uniquely identify the publication. One disadvantage of the system is that knowing the ISBN number does not give information where to find the document online. There is no “handling system” for ISBNs. That is why we looked at an additional system to identify e-IRG documents. The results of that investigation can be found in

<http://e-irgsp5.e-irg.eu/documents/325162/363451/PIDfore-IRG.pdf>

In summary: for e-IRG we use the following system:

1. Keep assigning ISBNs as PIDs. It is a well known system and usable for actual and historical documents.
2. Create a catalogue of (actual) e-IRG publications <http://e-irg.eu/catalogue>,
3. Create a unique reference for each publication that is independent of the underlying content management system, for instance <http://e-irg.eu/catalogue/eirg-1000>.

4. The unique reference points to a catalogue entry of the publication. This contains metadata about the document and a reference to the actual document (or documents) of which the publication consists.
5. The catalogue entry contains also the ISBN number and any other PID for the document.
6. The catalogue entry descriptions need to be maintained and updated.

If someone wants to have a persistent link to the document, the unique reference for each publication is to be used. This system assures persistency of references for at least the lifetime of e-IRG.

### 3 Strategic Communication Plan

### 3.1 Audiences

The communication and dissemination activities address the following audiences:

- e-Infrastructure-operators, including EGI, RDA, PRACE, EUDAT, IDGF
- Infrastructure stakeholders (especially owners/operators or developers of particular infrastructures, e.g. ESFRI projects, national data centres, operators of research- and e- Infrastructures, owners of instrumentations, but also industry owners of e-Infrastructures, which may be interested in e-IRG results).
- Policy and regulatory stakeholders (relevant bodies responsible for defining national and European policies and regulations).
- Users of Research and e-Infrastructures.
- Standardization stakeholders. One notable standardisation organisation is the Research Data Alliance (RDA).
- Funding agencies including ministries responsible for the definition of e-Infrastructures.
- KPI stakeholders.
- General audience.

We will use these categories to indicate to which audience we address a specific communication activity.

Since last year, two new groups have emerged as specific audiences:

- European Open science Cloud (EOSC)
- EuroHPC

These groups will get special attention during the second period.

As global formal categories for identifying communication activities in our Dissemination list we use:

- Scientific Community (Higher Education, Research)
- Industry
- Civil Society
- General Public
- Policy Makers
- Media
- Investors
- Customers
- Other

These categories are prescribed by the European Commission.

### 3.2 Communication Instruments

The content of this section is the same as in D5.1. It is included here to have a complete up-to date Strategic Communication Plan in one place.

#### Inventory of communication instruments

Websites, Newsletters, Press releases, Articles in magazines, Flyers, Presentation slides, Posters, Incentives (e.g. sticky cleaners).

#### Website

A website provides the opportunity to present all the information related to the project (and e-IRG) in one place. Using a modern content management system it allows to include a lot of collaboration functionality, like document repository, message boards, access right system out of the box. An own website also allows to create the impression you want by applying the lay-out that will be most helpful to your audience. You can see how many people view your web pages and download your documents. Because you control your own website – if you are using the right provider – you do not have to adhere to rules of – foreign – companies.

A website provides a central hub to which you can point all other communication activities.

#### How we use websites

In e-IRGSP5 we use a portal based on the Liferay open source portal software. We have several

distinct web sites: For the e-IRG itself, for the Knowledge Base, and for the e-IRGSP5 project. The e-IRG and e-IRGSP5 websites have a closed part, only accessible for partners and delegates. This is a collaborative space.

### Videos

In websites, flyers, and presentations you use pictures and photographs a lot. A video however is still seen as a separate communication tool. You can use a video for an interview. The advantage is that the person who is being interviewed directly can explain his ideas, topics and work. You can also use a video to record an event, like a workshop. Then the goal is to allow people who were not at the event to see what has happened. There are other uses, like animations or recorded demonstrations.

### How we use videos

We have two main usages for videos: interviews with key stakeholders, and recording of presentations during e-IRG workshops. In general we do everything from recording to post production which gives great flexibility. In a few cases we also work with raw material from other conferences or events.

### Social media

Social media are a great way to interact with the community. They also provide insight about who interacts, and when. You can tell how many people

saw your tweet, how many replied, and how many engaged with them in another way. Thus, the impact of these social activities both in quantitative and qualitative terms are very easy to assess.

### How we use social media

We use three distinct types of Social Media: Twitter, LinkedIn and a News Blog. They each serve a different purpose, and together give a broad audience coverage.

What about SnapChat, Facebook, WhatsApp, Google+, PinInterest, Instagram, and all the others? Our main stakeholders tend to predominantly rely on the Social Media channels we use for professional usage. Also we cannot explore them all because our resources are limited.

### MICE2

Meetings, Incentives, Conferences & Exhibitions are standard communications mainly used in industry. A good mix can reach a wide audience. Although predating the Internet, it is still worth to consider them in any communication mix.

### How we use MICE2

WP2 organises the main e-IRG delegates meetings and workshops. WP5 assists. In addition as part of the liaison activities, we participate in many events. We also conduct video interviews at

events. In a few cases (about once or twice a year) we participate in an exhibition with a booth, preferably jointly with sister projects.

We have some large roll banners that can be used as background during events (they look nice in the background of a Tweet picture).

Incentives are to be used sparsely. The 1000<sup>th</sup> pen one gets, does not really remind one for long about e-IRG. Currently we have sticky cleaners as incentive. They also have some text around them. These are new, a bit useful, and need some explanation so are perfect to start a conversation with a stakeholder at a liaison event.

### Newsletters & magazines

Newsletters and magazines combine several, or sometimes a lot, of articles. They are sent out at regular intervals. They can be used to keep people aware or to inform or entertain them.

### How we use a magazine

We use a magazine – which is for historical reasons called Newsletter – to inform the e-Infrastructures community at large with news, background articles, workshop reports, etc. We do that twice a year.

### And we do more

Some smaller tools like standard presentations and templates.

### 3.3 Communication Goals

Establishing success measurements (metrics) for the dissemination of the project results is a requirement for H2020 projects. For us, however it is broader as we are also responsible for the communication of the e-IRG.

Monitoring of the project progress conducted throughout its lifespan will help to achieve defined dissemination/communication and exploitation objectives. The impact of a communication effort will be assessed in precise terms, including:

- The number of users visiting project's web pages.
- The number of downloads of documents and accesses to video material.
- The number of Twitter followers and members of the e-IRG LinkedIn group.
- The number of events organised to external public (in co-operation with e-IRG).
- The number of events' visitors.
- The number of media, publications, and presentations referencing e-IRG or its work, such as the e-Infrastructure Commons.

The exact numbers we expect to reach were established in the Initial Communication Plan,

D5.1. In this deliverable we present the achieved metrics in Chapter 6, Metrics. Analysing these results, we see our activities and metrics still support our overall communication goals.

### 3.4 SWOT analysis

Sections 3.4.1 – 3.4.5 are largely unchanged from the previous version. The SWOT analysis is still valid. Section 3.4.6 *Activities derived from the SWOT analysis*, contains a new analysis from the actions presented previously.

We present a SWOT analysis for Communication only. It is not to be considered as a SWOT for eIRG or e-IRGSP5 as a whole.

#### 3.4.1 Strengths

- I. e-IRGSP5 partners have a lot of experience in supporting the e-IRG

In the project consortium, several partners have participated in the previous e-IRGSP projects. They know e-IRG and its ways of working very well. Other partners are new to e-IRGSP. They can provide new and fresh ideas as how to better organize the support for the e-IRG delegates.

2. Good communication skills

Within the series of e-IRGSP support projects, some excellent tested and tried communication tools have been developed to reach different audiences and stakeholders. Tools alone are not enough, however. The trick is how to use them appropriately in different circumstances. The e-IRGSP5 consortium is hosting the necessary expertise to efficiently communicate with the tools at hand within the reserved budget.

3. Well visited website

e-IRGSP4, the previous support project has put a new website in place for e-IRG, based on Liferay. It consists of a public part, as well as a private one for the delegates. The website has a clear structure with links to the news and events sections, a user-friendly download section to retrieve documents. The Knowledge Base presents an overview of the e-Infrastructure landscape within Europe. The delegates space is only accessible via login to accommodate for a private workspace for the delegates.

4. Known in the community

e-IRG by now has gained its place within the e-Infrastructure community that

consists of many different organisations, including EGI, ESFRI, EUDAT, RDA, PRACE, GEANT, IDGF, EOSCHub and TERENA. They all approach the e-Infrastructure field from a different angle according to their experience and expertise. With the set up of the e-Infrastructure Commons concept, e-IRG hopes to provide the binding glue between the different approaches. e-IRGSP5 is supporting this ongoing process.

#### 5. Good workshop organisation

e-IRG organises two open workshops each year. Interaction between all stakeholders is high on the agenda during these workshops. The break-out sessions stimulate the discussion and invite the participants to present their views on the e-IRG themes and topics from different angles. The e-IRG workshops function as a creative laboratory where thoughts and opinions emerge. These ideas focus on how to establish the e-Infrastructure Commons as a practical model for the European research community. The support project takes care of the workshop logistics.

### 3.4.2 Weaknesses

1. Not yet an efficient document production schedule.

e-IRGSP5 is working on a plan to smoothly process the different phases of the e-IRG document production cycle in a way that is transparent for e-IRG delegates and e-IRGSP5 partners.

2. Too many e-IRG documents. Not clear when they will arrive.

e-IRGSP5 is refining the dialogue with the e-IRG delegates to follow up the status of the large number of documents that are being produced. Separate working groups are being set up to deal with the different documents to facilitate the document streaming between e-IRG and e-IRGSP5. The support project is also working on a system to provide each document with a persistent identifier to access them, e.g. DOI.

3. e-IRG activities are a bit boring

e-IRGSP5 can help the delegates to communicate e-IRG activities to their local ministries and audiences by adapting general dissemination materials which are already in place, such as flyers and presentations, to the specific audiences that have to be addressed. It will help to

better put e-IRG on the map in the local communities and EU Member States.

### 3.4.3 Opportunities

1. European Open Science Cloud

The European Open Science Cloud, initiated by the European Commission, matches the work the e-IRG has started with the e-Infrastructure Commons. The e-Infrastructure Commons is an essential building block for the European Open Science Cloud. e-IRGSP5 initiated communication about how the Commons can leverage the Open Science Cloud Communication.

2. Supercomputer and Quantum computing developments

In the international news channels, e-IRGSP5 is following up and distributing all recent announcements in the areas of supercomputer and quantum computing for possible integration of these technologies into the e-Infrastructure Commons in order to better support the Research Infrastructures.

3. Research Infrastructures are getting more support

Integration of the different emerging computing technologies within the e-Infrastructure Commons is key to support the Research Infrastructures. Using the e-Infrastructure Commons as a lever, e-IRGSP5 is communicating the idea of a digital open market place within Europe and globally to support big scientific research but also the long tail of data.

### 3.4.4 Threats

- I. e-Infrastructures only seen as part of Research Infrastructures

e-Infrastructures are not so much a part of the Research Infrastructures as they are in fact a digital implementation tool to support the Research Infrastructures. Through the concept of the e-Infrastructure Commons e-IRGSP5 is communicating the usefulness of this concept for e-IRG.

2. Many Advisory Boards

e-IRGSP5 is trying to produce a map of the different advisory bodies in the community, e.g. GEDE, stakeholders responsible for the European Open Science Cloud and the large number of high level groups for the deployment of different aspects of the e-Infrastructure landscape. Representatives of these advisory bodies are invited to e-IRG workshops to foster active collaboration.

3. Organisations adopting e-Infrastructure Commons without reference.

The concept of the e-Infrastructure Commons is wandering around for some time in the community. e-IRG has organized workshops around this concept and participants are slowly taking up the idea and making use of it within their own organisations. e-IRGSP5 has to support e-IRG in clearly communicating that e-IRG is the father of this concept and therefore

responsible for its deployment within the community. e-IRGSP5 is helping e-IRG delegates not to be disregarded in the community when talking about the e-Infrastructure Commons.

### 3.4.5 SWOT Table

In the table we can see which strengths can be used to handle threats and take opportunities. We also see which weaknesses have to be addressed.

		Strengths					Weaknesses		
		s1	s2	s3	s4	s5	w1	w2	w3
Opportunities	o1				x		x		
	o2	x							
	o3							x	
Threats	t1		x						
	t2					x			
	t3			x					x

### 3.4.6 Activities derived from the SWOT analysis

Activities derived from the SWOT analysis in D5.1 and discussion after the first project period.

**s4/o1** The European Open Science Cloud will support the e-Infrastructure community using the glue of the e-Infrastructure Commons.

*Discussion:* The EOSC workshop and the e-IRG workshop were planned together in Tallin. At the EOSC workshops presentations noted the importance of the e-Infrastructure Commons as an underlying principle for the EOSC.

**w3/t3** e-IRGSP5 will adapt its communication tools to local stakeholders and ministries in the EU Member States to convince these parties of the relevance of e-IRG as enabler of the e-Infrastructure Commons or other new e-Infrastructure ideas.

*Discussion:* The communication goes through the representatives that are e-IRG members.

**t2/s5** Careful planning of e-IRG workshop programmes allows to invite and discuss with different stakeholders, become familiar with advisory boards in the community, get to know

each other's agenda for the e-Infrastructure landscape, and search for complementary ways to collaborate.

*Discussion:* This point needs continuous attention. Because the EOSC and EuroHPC are still very much under development.

**s1/o2** e-IRGSP5 partners have expertise in the latest technologies and can support e-IRG delegates in communicating about these technologies to the different stakeholders in the community.

*Discussion:* Within EuroHPC e-IRG seems to be assigned a role. Quantum Technology developments still need attention.

**w2/o3** Faster document delivery by e-IRG and easier access by third parties can enhance the uptake of the e-Infrastructure Commons within the Research Community and provide them with the support they need.

*Discussion:* Two documents have successfully been supported and disseminated during the first project period. However the flow of documents is still not stable.

**s2/t1** e-IRGSP5 has to use the available communication tools in the most efficient way to help e-IRG reach the research community in order to convince them that the e-Infrastructure Commons will help deliver excellent research.

*Discussion:* Done during the first period. EOSC which incorporates the e-Infrastructure Commons can be clearly distinguished from Research Infrastructures.

**s3/t3** A well-structured and fully operational e-IRG website and internal collaboration space can be most helpful to serve both as a tool and weapon for the e-IRG delegates to defend the good cause of the e-Infrastructure Commons and promote the new e-Infrastructure ideas. The Knowledge Base provides rich documentation for the delegates to play their role as e-Infrastructure Commons ambassador.

*Discussion:* This has been done during the first period. During the second period we will focus on these strengths too.

**w1/o1** A smoother document production cycle between e-IRG and e-IRGSP5 will facilitate the conversation with the European Commission when discussing the integration of the e-Infrastructure with the European Open Science Cloud.

*Discussion:* There are discussions underway to streamline the process.

### 3.5 Communication Matrix

In the communication matrix we summarize the communication activities for our main audience

categories. It serves to remind us what communication goals we want to achieve and how we want to achieve those. We added in this

deliverable the EOSC and EuroHPC as target audiences.

Audience	Communication goal	Communication instruments	Communication pulses
e-Infrastructure-operators, including EGI, RDA, PRACE, EUDAT, IDGF.	Inform, liaise, collaborate	Twitter, News blog, workshop, Newsletter	Daily
EuroHPC and EOSC communities: especially the governance establishing parts, but also the e-Infrastructure parts.	Inform, liaise, collaborate	Twitter, News blog, workshop, Newsletter	Weekly
Infrastructure stakeholders (especially owners/operators or developers of particular infrastructures, e.g. ESFRI projects, national data centres, operators of research and e-Infrastructures, owners of instrumentations, but also industry owners of e-Infrastructures, which may be interested in e-IRG results).	Inform, liaise, collaborate	Twitter, News blog, workshop, Newsletter	Weekly/Monthly
Policy and regulatory stakeholders (relevant bodies responsible for defining national and European policies and regulations).	Inform	Twitter, News blog, workshops, Newsletter	Yearly (twice)
Users of Research and e-Infrastructures.	Inform	Twitter, News blog, LinkedIn	Yearly
Standardization stakeholders.	Inform	Newsletter	Yearly (twice)
Funding agencies including ministries responsible for definition of e-Infrastructures.	Inform, liaise	Newsletter, Presentation package, Flyer	Yearly (twice)
KPI stakeholders	Collaborate	Liaise	Monthly
General audience.	Inform	Twitter, LinkedIn	No specific timescale

## 4 Operational Communication Plan

The operational plan covers the second project period, the last 12 months of the project from December 2017 until November 2018. In the Operational plan we describe the detailed communication activities, derived from the Strategic Communication plan. We describe concrete activities.

### 4.1 Portal

At the portal level we will continue to focus on:

- e-IRG web site
- Closed e-IRG website for delegates
- KnowledgeBase website
- e-IRGSP5 project websites

The e-IRG website, both external and internal (for the delegates) will be maintained. News will be added to the newsblog, as well as new events and workshop information. Although it would be nice to upgrade the site to Liferay 7 from the current 6.2., and improve the design, there are no funds available to redesign the site.

Nevertheless we will do some smaller reorganisations to get the results of the work of the e-IRG more prominent on the portal.

### 4.2 MICE2

At the MICE2 level we support e-IRG with the same tools as in the previous period:

- Flyer
- Presentation kit
- Participation in selected events
- Newsletter (two times per year)
- Publication support

We are still considering renaming the *e-IRG Newsletter* to *e-IRG magazine* which more reflects its contents.

As before, the flyer will be adapted for each new use or event.

Publication support will continue to provide layout and publication services for documents produced by other WPs. We will use the new PIDs on each e-IRG document.

The presentation kit will be updated once more containing an updated version of the general e-IRG presentation.

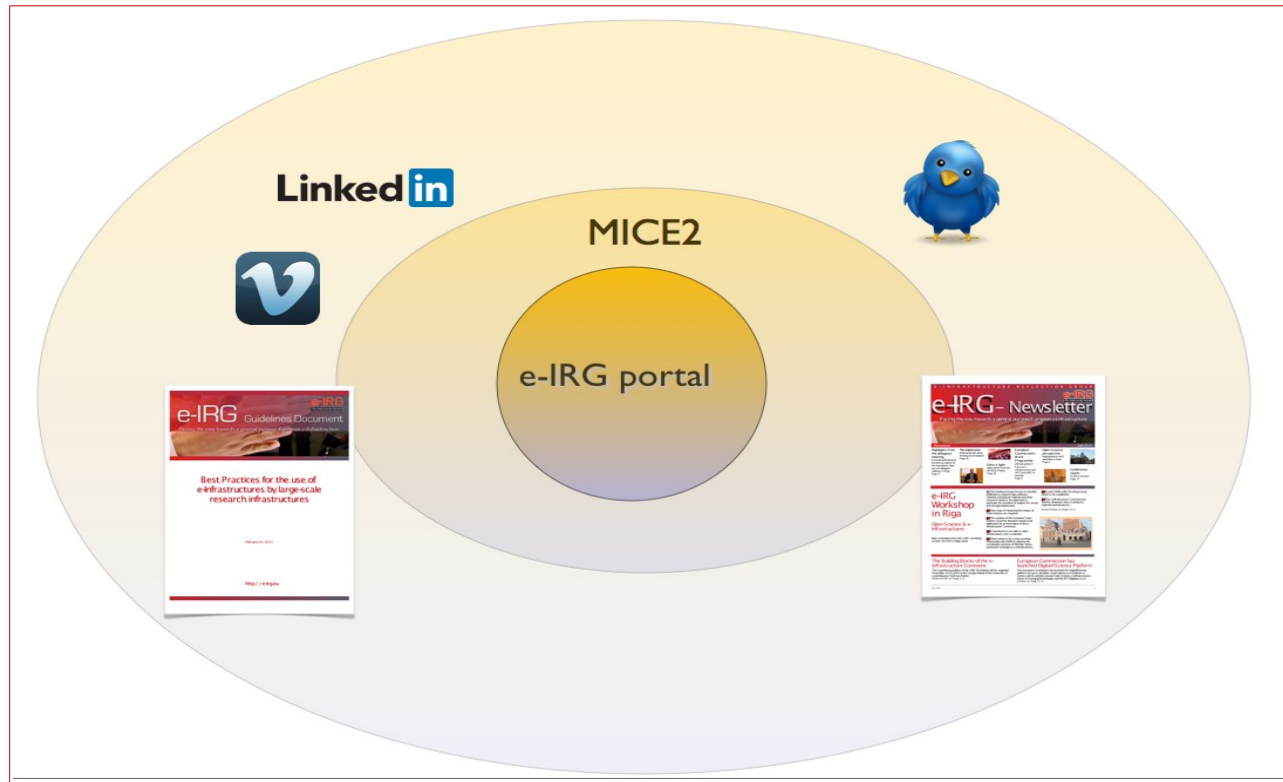

### 4.3 Social Media

- News blog with RSS
- E-mail list (maintained by WP2)
- Twitter
- LinkedIn

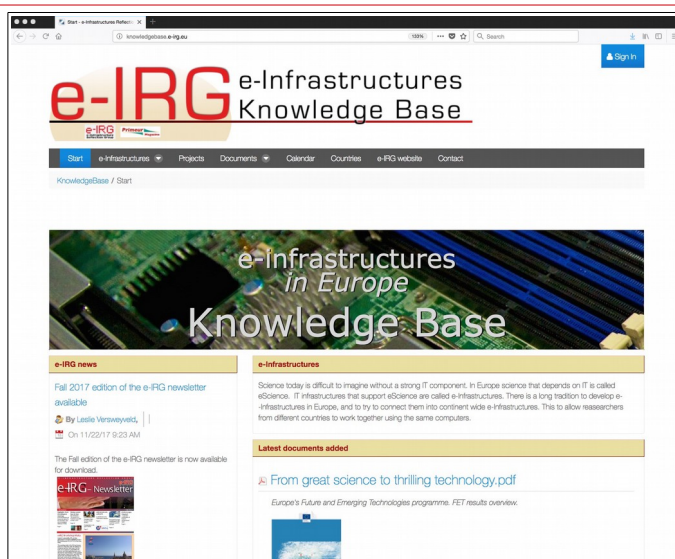

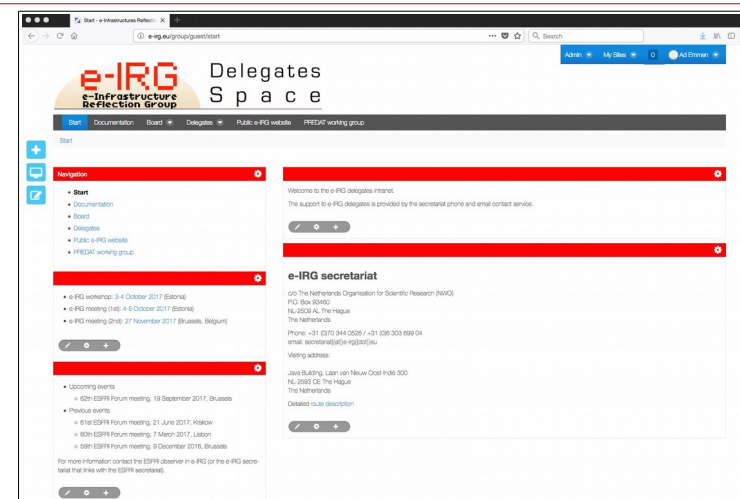

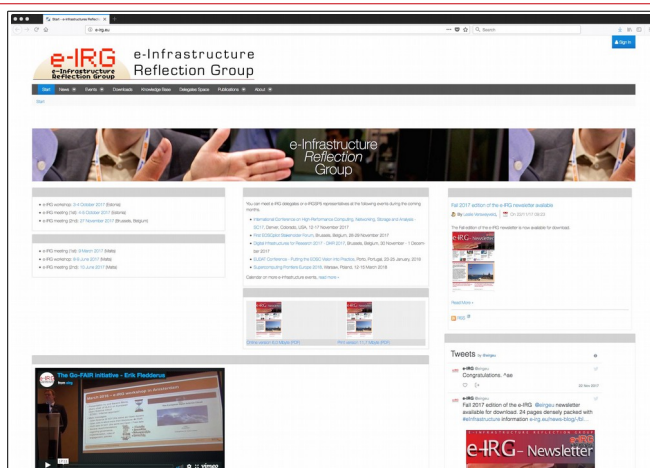

With Twitter we are fast and engaging. Tweeting from conferences and events is still a great way to engage people who are not at the event. In between events we select relevant community news to tweet about. Because more and more events are live streamed, such as the EOSC launch event in Brussels, it is also possible to Tweet live from these conferences.

We try to tweet regularly; on average several times per week. With LinkedIn we provide more in-depth content.

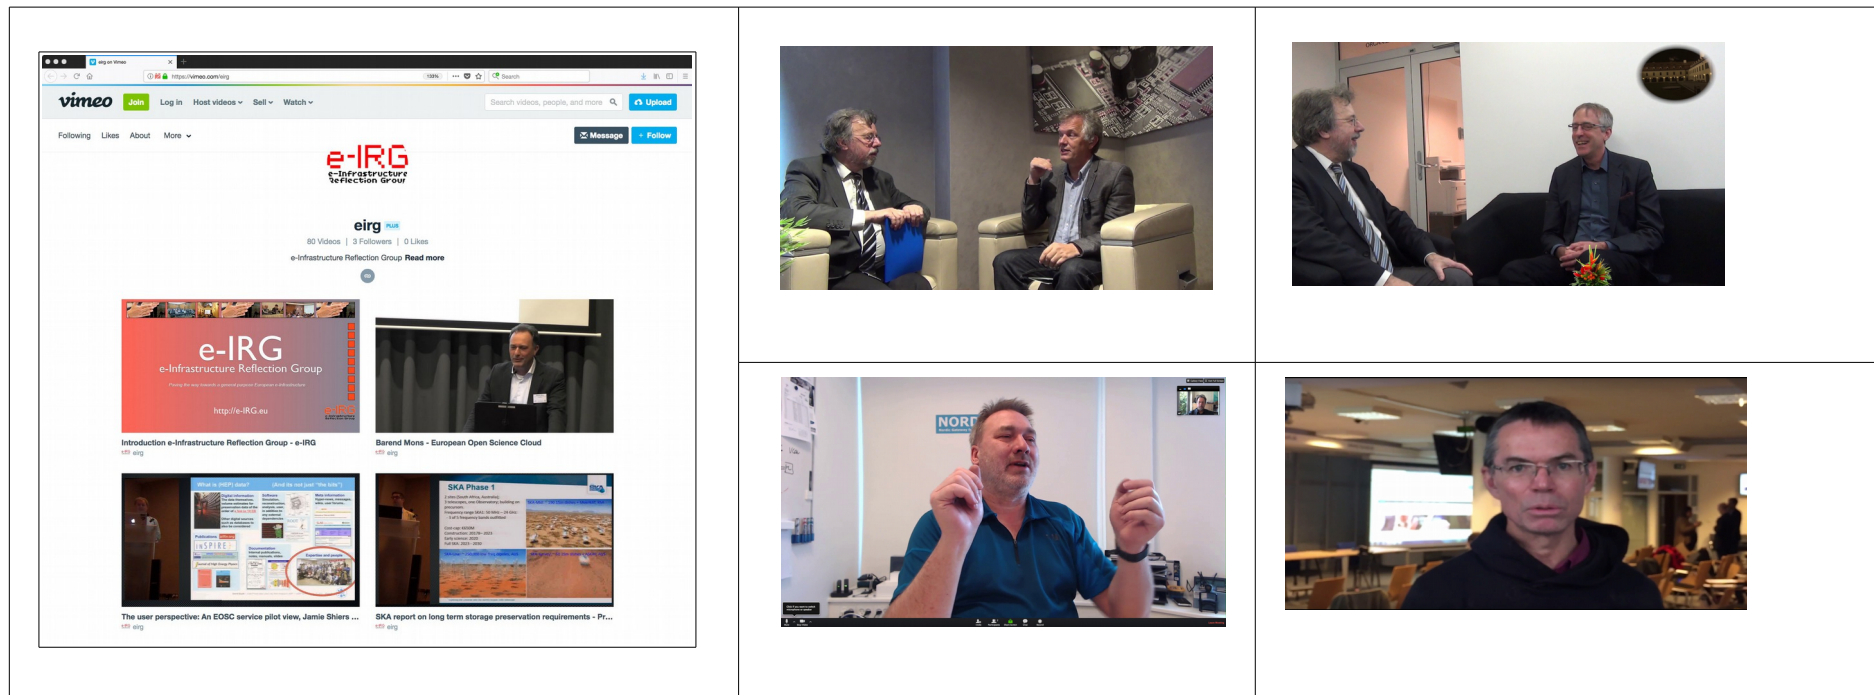

Our News blog on the portal is also a great way to communicate news and background. As we have seen from the results of the previous period, it attracts a lot of views. We continue with publishing – on average – about one news item per week covering both e-IRG news and e-Infrastructure news at large. The LinkedIn coverage is similar, although we will also stimulate others to contribute to the e-IRG LinkedIn group page.

*The e-IRG portal is central to all other communication activities: MICE2, social media, publication support.*

Pages from the portal.

*Vimeo Video channel and some of the interviews with e-IRG stakeholders.*

## 4.4 Information flow to stakeholders

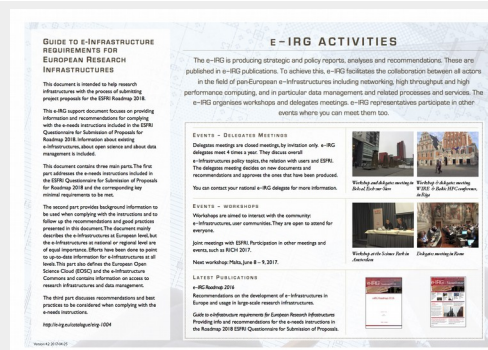

The plans for information flow to stakeholders have not changed since the previous deliverable. We include them here to have a complete up to date Operational Communication plan in one document.

We use several news outlets to bring the information to our stakeholders. The next table shows which type of news we push through which channel.

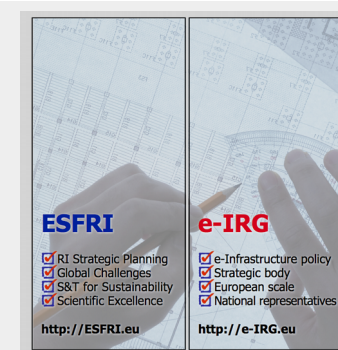

Bringing news to e-IRG stakeholders					
Timescale	Daily	Weekly/monthly	Weekly/monthly	Quarterly	Semester
Communication tool	Twitter	News blog	LinkedIn	Messages to the e-mail list	Newsletter
News type	News flash	News articles	Shorter news items	Short News takes	News and background articles
News goal	Awareness	Information	Information, spark discussions	Awareness, targeted information on e-IRG events and news	Complete overview

Booth support at events.

A flyer adapted for a specific event.

Sticky cleaners (collaboration with StrESFRI).

Communicating reference and background material to e-IRG stakeholders						
Type of resource /Outlet	Official e-IRG documents	e-IRG workshop and meeting reports	Recordings from e-IRG sessions	E-Infra-structure reference material	Interviews	Communication reference material
e-IRG portal	X	X	Embeds	X	Embeds	X
e-IRG Knowledge Base	X			X	Embeds	
e-IRG Vimeo channel			X			Introduction video

Recent e-Infra innovation examples						
Scale	Date	e-Infra	Costs	Industry involvement	Funding organisation	
Small	April 2017	 <p>Little Green Machine II Special designed cluster for modelling</p>	€ 200.000	IBM, ClusterVision	NWO	
Medium	April 2017	 <p>HNSciCloud Science Cloud</p>	€ 5 million	T-Systems, Huawei, IBM, RHEA Group, T-Systems, exoscale, SixSq	Pre-Commercial Procurement	
Large	April 2017	 <p>EuroHPC Exascale supercomputing</p>	€ 5 billion	Dozens of companies (ETP4HPC)	From 7 countries, EU	

#### 4.4.1 Liaison with other projects

As a project we have a special relationship with two other support projects: StR-ESFRI and eInfraCentral. With StR-ESFRI because of the collaboration between ESFRI and e-IRG, with e-InfraCentral, because we both work on – different

– aspects of KPIs. With StR-ESFRI we schedule regular quarterly meetings. We cross reference each other's communication activities and look for joint dissemination opportunities.

The collaboration with e-InfraCentral will be mainly done by WP4 which is looking into KPIs

from the e-IRGSP5 perspective. In WP5 we will be providing support to, for instance, joint KPI document releases. We did set up joint working space supporting the meanwhile created joint e-IRGSP5/e-InfraCentral KPI working group which communicates on a biweekly basis.

#### 4.4.2 Liaison plan for liaison with stakeholders

The following table provides a detailed liaison plan layout for specific stakeholder organisations.

Stakeholder	Stakeholder contact	e-IRG(SP) contact	Liaison goal	Expectation	Outcome	Comment
European Commission	DG Connect/DG RTD persons	Gabriele von Voigt (Chair)	Communication about e-IRG documents and decisions	Voice of e-IRG to be heard. Good understanding of EC and EU goals		
StrESFRI	Fotis Karayannis, Anastasios Patrikakos	Jan Wiebelitz, Fotis Karayannis, Ad Emmen	Collaboration on joint activities	Joint communication activities. Use each other's communication results		
eInfraCentral	Elina Grinicie, Alaisdair Reid, George Papastefanatos	Marcin Lawenda, Jan Wiebelitz,	Collaboration on KPI definition	Joint KPI definition framework. Inclusion of KPI's in KnowledgeBase (through API)		
RDA		Fotis Karayannis,	Keep each other informed			
ESFRI		Sverker Holmgren	Represent e-IRG in ESFRI WG			
EoSC	Large number in community		Communication about Commons. Liaison.			
EuroHPC		e-IRG delegate t.b.d. Ad Emmen, Marcin Ostaz (e-IRGSP5)				

#### ***4.5 Tentative schedule of publications to be supported***

List of planned official publications of the e-IRG:

- Proposal for a document about countries' views on EOSC

Furthermore we will follow the e-IRG document production plan.

#### ***4.6 Tentative schedule of events***

The next table shows a list of events in which e-IRGSP5 partners or e-IRG delegates that we support intend to participate.

Date	Event	Place	Audience	Audience size estimate	Who will be attending	Communication goal
12 December, 2017	SURFsara Super D event	Amsterdam, The Netherlands	HPC users	350	Genias	EuroHPC Liaison
23-25 January 2018	EUDAT Conference – Putting the EOSC Vision into Practice,	Porto, Portugal	Data stakeholders	500	URNS, Hannover	Liaison/ Session
12-15 March 2018	Supercomputing Frontiers Europe 2018	Warsaw, Poland	HPC stakeholders	250		Liaison
21-23 March, 2018	11 <sup>th</sup> Research Data Alliance Plenary Meeting	Berlin, Germany	Data stakeholders		URNS	Liaison
28 May – 1 June 2018	European HPC Summit Week 2018 including PRACEdays 2018	Ljubljana, Slovenia	e-Infrastructure providers (supercomputers) & users		BSC	Liaison, Promote e-Infrastructure Commons
10-14 June 2018	Terena Networking Conference - TNC18,	Trondheim, Norway	E-Infrastructure providers (Networking) & users		SURFnet	
24 -28 June 2018	33 <sup>rd</sup> ISC High Performance Conference - ISC'18	Frankfurt, Germany	Industrial users, scientists, e-Infrastructures (Mainly HPC)	3.000	PSNC, Genias	Interviews, promotion, EuroHPC liaison
2-4 July 2018	Platform for Advanced Scientific Computing Conference - PASC18,	Basel, Switzerland	Scientific users, mainly HPC			
12 -14 September 2018	ICRI 2018	Vienna, Austria	Research infrastructures and e-Infrastructures policy			

## 5 KnowledgeBase

Plans for the KnowledgeBase during the second project period.

- Update the content
- Integrate KPI information
- Improve lay-out
- Under the hood streamlining

### 5.1 Update the content

The content of the KnowledgeBase gives background information in the context of e-Infrastructures. It includes information such as reference documents, descriptions of infrastructures, projects and policies. The KnowledgeBase collects information and makes it easily accessible. It does not produce data itself. i.e. we do not create data, we just collect it. To make it available and searchable we add or extract some metadata.

During the second period we will concentrate on incorporating more automatically added content. More and more, organisations are making data publicly available in easily accessible format. We take advantage of this.

### 5.2 Integrate for KPI information

In WP4 progress is being made towards collecting and aggregating KPI information. In WP5 we will make this available through the KnowledgeBase.

The descriptions of specific KPIs will be described in a graph-like structure and using some most likely existing classifications. The KPIs themselves are expected to be provided automatically (through an API or similar) by the infrastructures.

We are also investigating, together with eInfraCentral, an API format for exposing KPI information.

### 5.3 Improve lay-out

The way we display information needs continuous attention.

### 5.4 Under the hood streamlining

Here we will mainly concentrate on reusing and defining identifiers in such a way we can more easily aggregate information.

In addition the scripts need regular maintenance.

## 6 Metrics

In this section we provide quantitative goals for the dissemination activities. Please note these are not the same as the overall project metrics or project KPIs. They only serve at the end of the

first project year to see whether we did use our communication resources effectively.

We also include the results after the first project period in the next table.

Metric	Explanation	Goal for the total project duration from the DoA	Baseline (end of e-IRGSP4 November 2016)	Goal at the end of period I (November 2017)	Result at the end of period I (November 2017)	Comment
Unique visitors e-IRG website/month	A standard metric which is widely used and well-known	2.000	5.000	5.000	18.000 (In September and in October 2017) 7.000 (December 2016)	This is really is an unexpectedly high number.
Unique visitors KnowledgeBase website/month	A standard metric which is widely used and well-known		1.600	1.800	4.000 (In September and October 2017)	
Number of downloads of documents		Mentioned as metric		1000 downloads for important documents like Roadmap. 500 Downloads for informative documents like Newsletter	Cumulative downloads Roadmap 2016: 3.000 KPI document: 1.400 Newsletter Spring 2017: 2.000	
Twitter followers		Mentioned as metric	365	400	468 (November 22, 2017) During the two days of the e-IRG Workshop in Tallinn, Estonia, there were about 5000 tweet impressions.	We think that 500 is the realistic ceiling
LinkedIn members		Mentioned as metric	215	240	218 Members (November 23, 2017)	We think that 300 is the realistic ceiling

Popular News blog item views			800 – 1.500	1.000	<p>Press Release: e-IRG publishes Roadmap 2016 as a next step towards the e-Infrastructure Commons, 2017-01-11: 10.200</p> <p>Bridging socio-cultural distance in science through technical community-engaging mechanisms: 2017-02-07: 2.600</p> <p>e-IRG issues "Evaluation of e-Infrastructures and the development of related Key Performance Indicators" 2017-03-15: 2.200</p>	Six months after publication most blogs cross the 1.500 view line
Total number of dissemination activities in the dissemination list	According to EC reporting			100	114 (November 23, 2017)	Including each video and some of the main tweets (not each and every tweet)
Number of views on Vimeo/month	Channel with presentation videos. The video interviews are at another channel	Mentioned as metric		80	88 (October 2017)	It varies a lot, there are months with very few views and months with high view numbers. Related to whether we publish new material
Workshop visitors		Mentioned as metric			Number of participants for the workshops in Slovakia, Malta, and Estonia, are 58, 68, and 67.	Organised and counted by WP2
Mentions of e-IRG or e-IRG work		Mentioned as metric		25	About 25	Including mentions in news magazines, in reports and other documents.
e-IRG mailing list reach		2.000	1.820		1.839	Organised and counted by WP2

## 6.1 Contribution to assessing the impact of the e-IRG

To assess the impact of the e-IRG we also did a detailed advanced search on Google and on DuckDuckGo to find a first selection of possible interesting mentions that could potentially be related to the impact of the e-IRG. In most cases these are reports, deliverables, roadmaps and the like.

We ran the following Google search and restricted it to one year:

"e-irg"

-site:e-irg.eu

-site:vimeo.com

-site:youtube.com

-site:twitter.com

-site:e-irg.org

-site:surveymonkey.com

-site:genias.nl

-site:www.man.poznan.pl

-site:www.belspo.be

-site:dastelefonbuch.de

-site:pdffiller.com

-site:garr.tv

-site:facebook.com

Please note results may and will vary when you rerun Google searches. On DuckDuckGo we

could only partially restrict the sites due to a restriction on the search string length.

We were left with 100 links that we followed and investigated the contents of the linked page or document. Documents were found in several European languages. This led to an additional 16 documents that used e-IRG material or recommendations, additional to the ones that we had already found through direct contacts.

For details of a number of the important mentions we refer to the full Dissemination list. Most of these 16 documents are indicated with category "Other" in the list; "Genias" is indicated as responsible partner, although the responsibility is limited to searching and finding the reference.

## 7 Plan for “Dissemination and Exploitation of results”

Note: this plan has not changed since the last deliverable D5.1. We include it here for completeness.

### 7.1 Introduction

It is important to stress that e-IRGSP5 is a support project. We do not have a research component in the project, and hence will not generate any Foreground Knowledge. The results of the project will consist of documents, websites, videos and the like, in support of e-IRG. These results will be used, after the project finishes, by the e-IRG or any follow-on project in support of the e-IRG. Individual e-IRG partners will use the results as a demonstration of their skills.

### 7.2 Dissemination list

We will maintain a Dissemination list at: <http://e-irgsp5.e-irg.eu/dissemination>

The categories used to classify each activity are the ones we need to report in the EC participants reporting portal.

In the dissemination list we use the categories defined by the EC for the H2020 programme and that are to be used in the continuous reporting section of the project reporting portal.

#### Communication activities for H2020 reporting

- H2020 - Brokerage Event
- H2020 - Communication Campaign (e.g. Radio, TV)
- H2020 - Exhibition
- H2020 - Flyer
- H2020 - Non-scientific and non-peer-reviewed publication (popularised publication)
- H2020 - Organisation of a Conference
- H2020 - Organisation of a Workshop
- H2020 - Other
- H2020 - Participate to a Conference
- H2020 - Participate to a Workshop
- H2020 - Participation in activities organized jointly with other H2020 projects
- H2020 - Participation to an Event other than Conference or a Workshop
- H2020 - Pitch Event
- H2020 - Press release
- H2020 - Social Media
- H2020 - Trade Fair
- H2020 - Training
- H2020 - Video/Film
- H2020 - Website

It is not always clear how to count individual communication activities from the H2020 documentation. For instance, do you count Twitter as one social medium? Or do you count each individual Tweet? We choose to do something in between: we put important tweets in the list.

#### Audiences for H2020 reporting

- H2020 - Civil Society
- H2020 - Customers
- H2020 - General Public
- H2020 - Industry
- H2020 - Investors
- H2020 - Media
- H2020 - Other
- H2020 - Policy Makers
- H2020 - Scientific Community (Higher Education, Research)

Again, there can be some discussion about what to count in each category. And, of course, our own audience categories do not always match the H2020 ones, because we focus on some specific areas.

## 8 Conclusion

In this document we presented the results of the communication activities during the first project period and an update to the communication planning. The updates were based on the assessment of the results of the communication activities, and because of the changing environment. We also include the initial “Plan for

Disseminating and Exploitation of results” for completeness. In the appendix, we provide a complete list of dissemination/communication activities.

The communication plans are a large part of the document. We do not only communicate about e-IRGSP5, but mainly about the e-IRG and its activities. The communication plan consists of a Strategic Communication Plan – for the complete project period – and an Operational Plan that lists

the activities planned for the second project period.

We also provide communication metrics that can help assess the effectiveness of our communication efforts based on deliverable D5.1. These will be used in our final deliverable D5.3 *Final Communication Plan* at the end of project to assess the overall impact of the communication strategy.

## 9 What are we talking about?

We try to use plain continental English. However, sometimes we need an abbreviation or acronym that is not widely known. A few of those.

BMBF	Federal Ministry of Education and Research in Germany	EXDCI	European eXtreme Data and Computing Initiative	NWO	Nederlandse Organisatie voor Wetenschappelijk Onderzoek
BSC	Barcelona Supercomputing Center	GEANT	Pan-European Research and Education Network	PLAN-E	Platform of National eScience/Data Research Centers in Europe

EUROSTAT	European Statistics				

# 10 Appendix – List of all dissemination activities and mentions of the e-IRG

The following is a complete list of all dissemination/communication activities by the chair and members of the e-IRG and by partners of e-IRGSP5. It also lists documents that refer to e-IRG work that are not directly initiated by e-IRG or e-IRGSP5. The list below was compiled at 2017-11-23. The current list can be found at <http://e-irgsp5.e-irg.eu/dissemination>
