

e-IRGSP5

Deliverable

D5.3. Report on the Communication Activities

Planned Delivery Date:	2018-11-30
Actual Delivery Date	2018-11-30
Dissemination level	Public
Work Package:	WP5
Lead partner:	Genias
Document status:	Draft 1.1 (2018-11-22)

Copyright © 2018 Members of the e-IRGSP5 Project.

The e-IRGSP5 (“e-IRG Support Programme 5”) project is funded by the European Union. For more information on the project please see the website <http://e-IRGSP5.e-irg.eu>

About this document

This document is deliverable *5.3 Report on the Communication Activities*.

The deliverable D5.3 starts with an inventory of the activities we did during the second project period. It evaluates how the communication plan presented in deliverable *5.2 Updated Communication plan* did actually work out. We include metrics.

Because this is the last project deliverable it does not contain an updated version of the communication plan. The plan for dissemination and exploitation of results is incorporated in the project reporting done in the participants portal as part of the Periodic and Final reports.

1 Communication Planning

1.1 The importance of planning

When communicating about a topic or organisation, one always wants to do more, and better. There are always better ways of communicating and disseminating about a project like e-IRGSP5 and an organisation like e-IRG it seems. However, there is a major constraint to doing more, and that is money. There is a limited budget available for communication. This means that careful planning is needed to design the most effective means of communication targeted towards the communication objectives. A carefully designed set of actions that use money and resources in an effective way. Actions that are evaluated for their effectiveness. To this end we

started with Strategic and Operational Communication plans at the beginning of the project which was updated in the midst of the project. In the last report we evaluate our communication results against the planning.

1.2 Where this deliverable fits in

In the previous deliverables, *D5.1. Initial Communication Plan*, and *D5.2* we set out the global communication strategy for both e-IRG and e-IRGSP5, by defining a Global Communication plan. In addition, we defined an Operational Communication plan with the activities we did plan for the first and second project year. In this

deliverable, we evaluate the results of the communication activities during the second year.

This deliverable does not contain the *Plan for the Dissemination and Exploitation of results*. The Final version will be confidential and hence be part of the final and second periodic reports, not of D5.3.

2 Communication activities during the 2st project period

2.1 Introduction

In this chapter we give details on the communication activities we did during the first period. We also give metrics on usage and access.

We start with the developments of the portal which is the backbone of our communication strategy. We then continue with a description of the stakeholder liaison activities.

Support for e-IRG publications is an important activity. Publications are a major outcome of the e-IRG and need proper graphic design and distribution. During the second period there was no new e-IRG publication finished. So we concentrated on disseminating about existing publications

In this visual age, videos are becoming more and more important. But for those who prefer reading, we have our biannual Newsletter and a Newsblog and some other social media activities.

We conclude this chapter with discussion of the persistent identifier system that we implemented for official e-IRG publications.

2.2 Portal

2.2.1 The e-IRG portal

The e-IRG portal is the main entry for people with an interest in e-IRG activities. The web site has been maintained and is regularly updated.

The newsblog has been updated on a weekly basis.

The meet-up events are regularly updated.

Genias created a new lay-out to display the e-IRG Workshop programmes. The overview of the different sessions and speakers is far more clear now, showing topics and speakers on the left and video taped presentations on the right.

Genias added content to the page of the e-IRG Workshop in Sofia, Bulgaria, adding information about the Regional Conference on "e-Infrastructures for excellent science in Southeast Europe and Eastern Mediterranean" that took place on 15-16 May 2018.

2.2.2 The e-IRG delegates space

The internal delegates website has updated information on upcoming and past e-IRG and ESFRI events, current and former e-IRG Board members and meetings, e-IRG delegate members, meetings and nomination dates. In this working space we also added a new section to support the e-IRG National Nodes working group. WP3 and WP4 partners are supervising these pages.

2.2.3 The e-IRGSP5 website

The e-IRGSP5 external website at <http://e-irgsp5.e-irg.eu/> and the e-IRGSP5 internal website at <http://intranet.e-irgsp5.e-irg.eu/> underwent no technical changes since the first period. The internal website is the intranet for the e-IRGSP5 project team. The contents is mainly produced by WP2, Secretariat.

The updated e-IRGSP5 dissemination list is available at: <http://e-irgsp5.e-irg.eu/dissemination>. This list contains all dissemination activities, not only for e-IRGSP5 but for e-IRG too.

The agenda items and minutes of the telco meetings are kept up to date at <http://intranet.e-irgsp5.e-irg.eu/telcos>

The tool for KPI classification has been regularly used and is available at: <http://intranet.e-irgsp5.e-irg.eu/kpi>

2.3 Participation and Liaison with stakeholders

We had 16 events and meetings where we talked or discussed with stakeholders from the e-Infrastructures and Research Infrastructures, as well as the HPC communities. In many events, the e-IRG chair or an e-IRG delegate represented the e-IRG. In other events, e-IRGSP5 partners participated.

2.3.1 Participation in events

✓ SURFsara Super D Event in Amsterdam, the Netherlands - December 12, 2017

From this event, three video interviews have been made available on the newsblog, featuring Thomas Skordas from the European Commission; Thomas Schulthess from the Swiss National Supercomputing Center; and Erik Schulthes from the GO FAIR International Support and Coordination Office.

✓ Improving long-term sustainability and opening up research and innovation infrastructures to industry and society in Sofia, Bulgaria – March 22-23, 2018

The e-IRG Chair attended this event.

Genias has produced a poster for the conference & exhibition: "Improving long-term sustainability and opening up research and innovation infrastructures to industry and society", March 22-23, 2018 in Sofia, Bulgaria.

The poster can be downloaded at <http://e-irg.eu/documents/10920/283008/e-IRG+poster>

✓ "Shaping Europe's Digital Future" in Sofia, Bulgaria - April 19, 2018

Ad Emmen from Genias attended the event. Aneta Karaivanova and Todor Gurov from the Institute of Information and Communication Technologies at the Bulgarian Academy of Sciences were involved in its organisation.

Ad Emmen from Genias had an interview with Commissioner Mariya Gabriel about the growing sense of community in the EuroHPC exascale initiative. This interview has been published in the Spring 2018 edition of the e-IRG News Magazine.

✓ International Conference on e-Infrastructures for excellent science in Southeast Europe and Eastern Mediterranean in Sofia, Bulgaria - May 15-16, 2018

This conference took place right after the e-IRG Open Workshop. The conference was a unique opportunity for regional scientists to showcase their work in selected research fields relevant for the region, as well as for presenting the latest

achievements resulting from the collaboration of countries in the region of Southeast Europe and Eastern Mediterranean in the area of e-Infrastructures and their use.

Ad Emmen from Genias interviewed Ognjen Prnjat, Vi-SEEM project coordinator and responsible for the conference. This interview appears on the e-IRG newsblog.

✓ Second European Open Science Cloud (EOSC) Summit 2018 in Brussels, Belgium - June 11, 2018

The e-IRG Chair attended this event.

✓ 33rd ISC High Performance Conference - ISC'18 Conference in Frankfurt, Germany - June 24-28, 2018

Ad Emmen from Genias Benelux attended the HPC Vision workshop organised by ETP4HPC in Frankfurt on June 24, 2018, before ISC.

Ad Emmen and Leslie Versweyveld from Genias Benelux attended the ISC'18 Conference.

Several interviews taken at ISC'18 have been made available on the newsblog, i.e. with Michael Resch, Chairman of the Gauss Centre for Supercomputing; Thomas Lippert, Chair of PRACE and Director of the Jülich Supercomputing Centre; Norbert Eicker from the Jülich Supercomputing Center; and e-IRG delegate Simon McIntosh-Smith, a professor of high-performance computing at the University of Bristol.

✓ HPC User Forum in Stuttgart, Germany - October 1-2, 2018

Ad Emmen from Genias Benelux attended and made two interviews. The first one was with Bastian Koller about the Excellerat project that is creating a Centre of Excellence for boosting engineering application codes into exascale area. The second one was with Andreas Wierse about the SICOS company that brings HPC to SMEs, both in simulation support and training.

✓ The European Open Science Cloud (EOSC): Austria takes initiative in Vienna, Austria - October 30, 2018

e-IRG delegate Paolo Budroni was responsible for organising this event.

The e-IRG Chair attended this event.

✓ Research Data Alliance's 12th Plenary Meeting in Gaborone, Botswana - November 5-8, 2018

Fotis Karayannis from Uranus Computing attended this event.

2.3.2 Liaison with specific stakeholder communities

✓ Towards the Ethiopian Knowledge Society in Addis Ababa, Ethiopia - February 19-22, 2018

At this event, e-IRG delegate Paolo Budroni talked about the European Open Science Cloud, RDA, and further transversal initiatives.

✓ 11th RDA Plenary Meeting in Berlin, Germany – March 21-23, 2018

Several e-IRG delegates and Fotis Karayannis from Uranus Computing attended the event.

Dr. Patti Brennan, Director at the US National Library of Medicine and Sarah Jones, Associate Director of the Digital Curation Centre at the University of Edinburgh provided us their summaries and impressions from this event. They appear in the Spring 2018 edition of the e-IRG News Magazine.

✓ PLAN-E Plenary in Paris, France – April 19-20, 2018

e-IRG delegate Lajos Balint held a presentation titled “e-IRG: a potential partner to PLAN-E?”

✓ TNC18 in Trondheim, Norway - June 10-14, 2018

Ilse Koning from SURF attended the event and talked with representatives of most National Research and Education Networks (NRENs) about the National Nodes questionnaire.

✓ International Conference for Research Infrastructures 2018 - ICRI 2018 in Vienna, Austria - September 12-14, 2018

The e-IRG Chair and e-IRG delegates Françoise Genova and Federico Ruggieri attended this conference and held a presentation.

Gabriele von Voigt talked about the e-IRG e-Infrastructures Commons in Europe and its current developments.

✓ Third Digital Infrastructures for Research Conference – DI4R2018 in Lisbon, Portugal - October 9-11, 2018

e-IRG delegate Sverker Holmgren and several partners from the eIRGSP5 support project attended this conference, i.e. Jan Wiebelitz from the Leibniz Universität Hannover, Fotis Karayannis from Uranus Computing, Todor Gurov from the Institute of Information and Communication Technologies at the Bulgarian Academy of Sciences, and Michalis Maragakis from the Greek Research and Technology Network.

Sverker Holmgren gave a presentation on Analysis of National Nodes as foundation for the European Open Science Cloud.

In a special session Fotis Karayannis presented the work on Key Performance Indicators in the presentation titled “Towards a common approach on KPIs from e-Infrastructures”. Co-authors were Jan Wiebelitz, Michalis Maragakis, and Ad Emmen from Genias Benelux.

For this presentation Ad Emmen provided a KPI analysis Demo and a tutorial-style webinar. Both have been put in the Vimeo channel for consultation.

The demo is available at:

<https://vimeo.com/294312078>

The webinar is available at:

<https://vimeo.com/294330433>

Todor Gurov wrote a summary of this event titled “Serving the user base”. This has been published in the e-IRG newsblog and in the Fall 2018 Edition of the e-IRG News Magazine.

✓ PLAN-E Workshop and 14th IEEE Conference on eScience in Amsterdam, The Netherlands - October 29-November 1, 2018

Ad Emmen from Genias Benelux attended both the workshop and the conference.

He provided a visual overview and summary of the PLAN-E Workshop that has been published in the Fall 2018 Edition of the e-IRG News Magazine.

Both workshop and conference were extensively live-covered through Twitter.

Three interviews were taken with Joeri van Leeuwen from Astron; Dieter Kranzlmüller from the Leibniz Rechenzentrum; and Juan Bicarregui from the EOSC Pilot project. The interviews will be published in due time.

Ad Emmen also had an audiotaped stakeholder interview with Peter Doorn from Data Archived and Networked Services (DANS) about the Key Performance Indicator (KPI) approach in this organisation.

2.4 Supporting official e-IRG publications

There was no new e-IRG Publication during this period. We concentrated on disseminating the previous published ones.

2.5 News Magazines

The former newsletter has been renamed as news magazine.

Two news magazines have been published in May 2018 and in November 2018.

2.6 YouTube and Vimeo Video channels

The total number of interviews published during the second period is 15. The total number of published video recordings of presentations is 38.

Genias has put 21 video films of the e-IRG workshop on October 3-4, 2017 in Tallinn, Estonia online at <https://vimeo.com/album/4914893>

and 17 video films of the e-IRG workshop on May 14-15, 2018 in Sofia, Bulgaria online at <https://vimeo.com/albums/5323583>

✓ One video interview has been released following the e-IRG Workshop in Tallinn, Estonia, October 2017:

ETAIS and eInfraCentral: a national and a European approach for offering e-Infrastructure services with Ilja Livenson, an IT specialist working on the Estonian Scientific Computing Infrastructure (ETAIS) project, and George Papastefanatos, a senior researcher and project manager at the ATHENA Research Centre and research associate with the University of Athens.

✓ Three video interviews have been released following the SURFsara Super D Event in Amsterdam, the Netherlands, December 2017:

European Commission explains why Joint Undertaking is well suited as legal instrument to help create EuroHPC ecosystem with Thomas Skordas, Director of "Digital Excellence and Science Infrastructures" of the European Commission's Directorate in DG Connect.

Combination of top-down initiatives like EuroHPC and bottom-up science driven projects make European exascale effort healthy with Thomas Schulthess, Director of the Swiss Supercomputing Centre - CSCS - in Lugano, Switzerland.

GO FAIR initiative to create implementation networks for stewardship of data with Erik Schultes, International Science Coordinator at the GO FAIR International Support and Coordination Office in Leiden, the Netherlands.

✓ Four video interviews have been released following the e-IRG Workshop and the International Conference on e-Infrastructures for excellent science in Southeast Europe and Eastern Mediterranean in Sofia, Bulgaria, May 2018:

Vi-SEEM virtual research environment emerges as a mini-EOSC for Southeast European and Eastern Mediterranean scientists with Ognjen Prnjat, Vi-SEEM project coordinator who works for the Greek Research and Technology Network.

European Open Science Cloud's federating core will give researchers access to existing e-Infrastructures and services with Augusto Burgueño-Arjona, Head of the e-Infrastructures and Science Cloud Unit in DG Connect at the European Commission.

ECMWF's scalability programme and co-design effort result in proposal for "Extreme Earth" Flagship Initiative with Dr. Peter Bauer, Deputy Director of Research at the European Centre for Medium-Range Weather Forecasts (ECMWF).

Exchange of experience and focus on specialisation are key to Europe regaining status in EuroHPC and e-Infrastructures with Ivan Dimov, Deputy Minister of Education and Science.

✓ Five video interviews have been released following the ISC'18 Conference in Frankfurt, Germany, June 2018:

DEEP-EST project is exploring the nuts and bolts of mildly disruptive modular supercomputing architecture with Norbert Eicker from the Jülich Supercomputing Center.

German HPC and EuroHPC, a question of competitive collaboration benefiting science with Michael Resch, Chairman of the Gauss Centre for Supercomputing.

Thomas Lippert to propose modular way of thinking to optimize both supercomputing technology and HPC policy with Thomas Lippert, Chair of PRACE and Director of the Jülich Supercomputing Centre.

World's first ARM-based Isambard supercomputer is ready for science with e-IRG delegate Simon McIntosh-Smith, a professor of high-performance computing at the University of Bristol.

Mont-Blanc 2020 project to develop key building blocks for the European Processor Initiative with Said Derradji, project coordinator of the Mont-Blanc 2020 project who works for Atos R&D in the Big Data and Security Department

✓ Two video interviews have been released following the HPC User Forum in Stuttgart, Germany, October 2018:

Excellerat project to create Centre of Excellence for boosting engineering application codes into exascale area with Bastian Koller from the Excellerat project

SICOS brings HPC to SMEs, both in simulation support and training with Andreas Wierse from the SICOS company

2.7 Knowledge Base

There has been a complete restructuring and redesign of the Knowledge Base which is available at <http://knowledgebase.e-irg.eu>. We describe that in a separate chapter in the second part of this document.

The document section of the Knowledge Base is a part that has not been changed, yet. Some of the documents added here:

French National Plan for Open Science. With this National Plan, France is adopting an ambitious Open Science policy that aligns with international

commitments it has made for the Open Government Partnership (OGP).

Financing the future of Supercomputing - How to increase investments in high-performance computing in Europe. This document provides an overview of how HPC in Europe is financed today and gives recommendations on, for instance, the adoption of financial instruments.

Genias worked on the lay-out of the page with the National Road Maps Research Infrastructures at

<http://knowledgebase.e-irg.eu/national-road-maps-research-infrastructures>

But, as said, most changes are described in chapter 4.

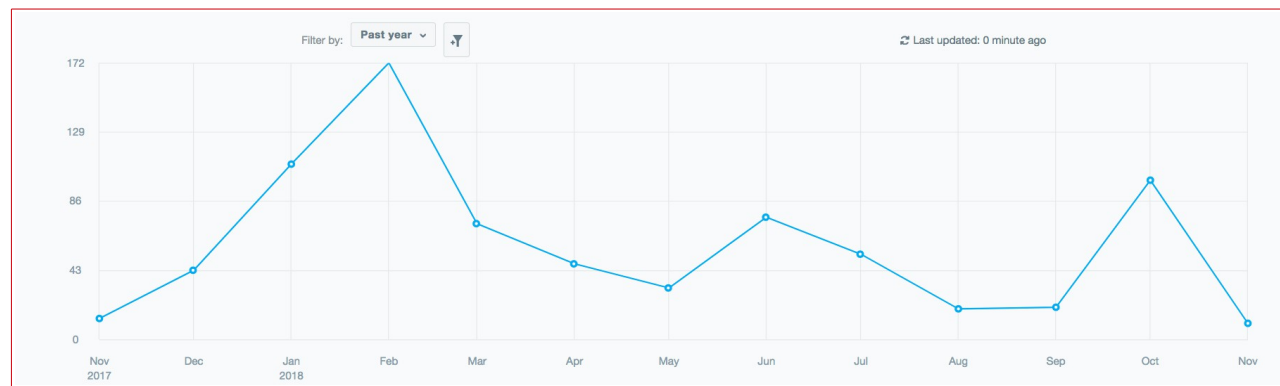

2.8 Social media

Twitter has been used on a regular basis to comment during events. During the <https://plan-europe.eu/> in Amsterdam, a workshop with topics of great interest to e-IRG, we had over

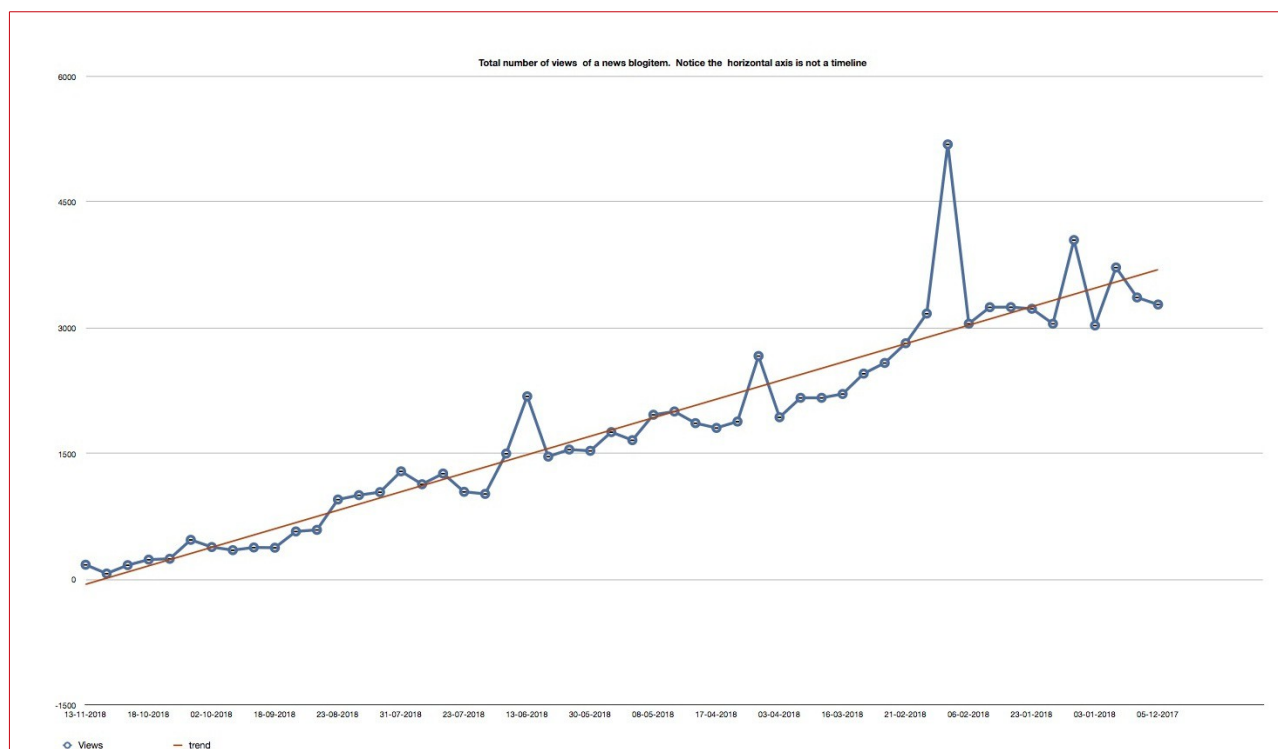

10.000 Tweet impressions in one day. The next day about another 5.000 tweet impressions from the workshop tweets were counted. This was the most successful Twitter day for the e-IRG Twitter account. The total over about 4 days for the whole eScience conference in which PLAN-E was embedded was about 20.000. We refer to the dissemination list in Appendix A for more examples.

LinkedIn is used to announce video-interviews, publications and events. After LinkedIn has changed its editorial tools, we do not get our posts looking as nice as before. We refer to the dissemination list in Appendix A for concrete examples.

The e-IRG newsblog has weekly articles on current developments and news with regard to e-Infrastructures, the European Open Science Cloud, EuroHPC, publication of official e-IRG documents, event announcements, and interviews. During the past year we had over 50 newsblog items published.

Vimeo views per month for videos on the video channel.

Cumulative number of views per blog item as measured on November 15, 2018.

2.8.1 Vimeo Analysis

The Vimeo statistics show views per month. These vary greatly during the year. Most of the content is published in short time periods.

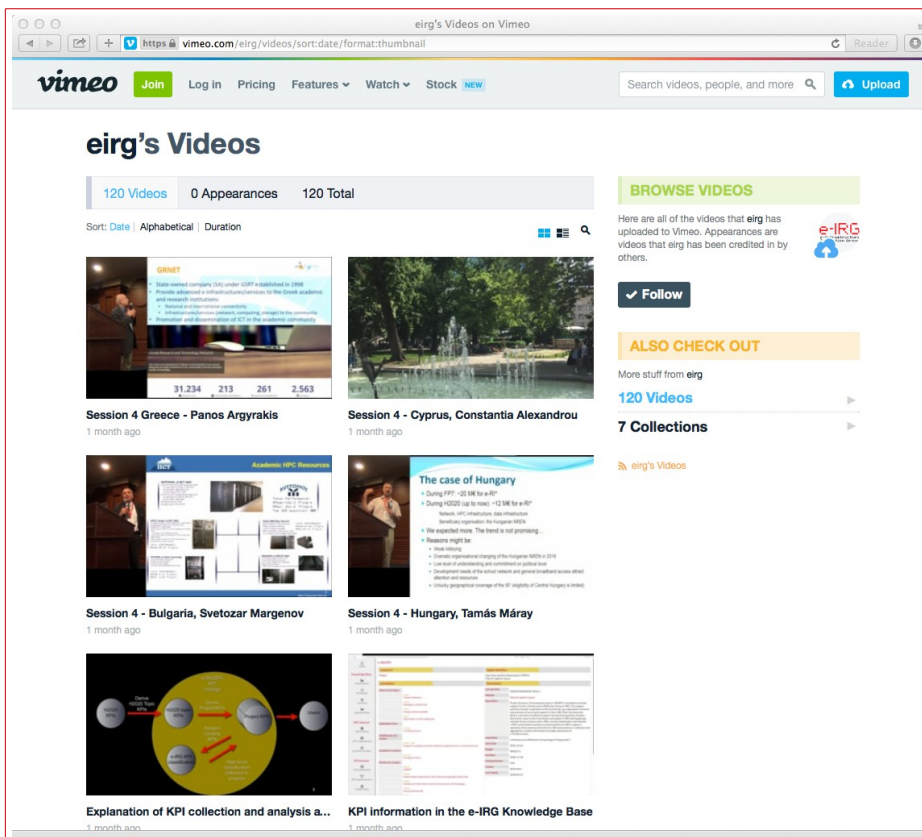

2.8.2 Newsblog analysis

On November 15, we looked at the total number of views that a newsblog had until that date starting December 1st 2017. Of course, older newsblogs tend to have more

views collected than newer ones. On average each blog is read 250 times each month for the first year. Four blog posts received a much higher than average view count. See the metrics table.

We use many well established communication tools. Sometimes we try a new one, like this graphical novel type of workshop report. I tries to capture the spirit of a Twitter mini-blog about the event. Pictures are from the actual Twitter stream. Light conditions where not optimal.

The screenshot shows the Vimeo channel page for 'eirg's Videos'. The page has a header with the Vimeo logo, navigation links (Join, Log in, Pricing, Features, Watch, Stock), a search bar, and an Upload button. Below the header, the channel name 'eirg's Videos' is displayed, followed by statistics: 120 Videos, 0 Appearances, and 120 Total. A 'BROWSE VIDEOS' section is visible on the right, along with a 'Follow' button and an 'ALSO CHECK OUT' section. The main content area displays a grid of video thumbnails with titles and upload dates:

- Session 4 Greece - Panos Argyrakis** (1 month ago)
- Session 4 - Cyprus, Constantia Alexandrou** (1 month ago)
- Session 4 - Bulgaria, Svetozar Margenov** (1 month ago)
- Session 4 - Hungary, Tamás Máray** (1 month ago)
- Explanation of KPI collection and analysis a...** (1 month ago)
- KPI information in the e-IRG Knowledge Base** (1 month ago)

En nog 3 andere leuke plaatjes

3 Assessment

3.1 Use of Twitter and LinkedIn

The e-IRG Twitter account had 11.000 views (impressions) in 28 days with regard to the coverage from the e-IRG workshop in Sofia, Bulgaria.

For the PLAN-E workshop on October 29, 2018, there were about 20.000 tweet impressions.

3.2 Metrics

In this section we report on the quantitative goals for the dissemination activities. Please note these are not the same as the overall project metrics or project KPIs. They only serve at the end of each

project period to see whether we did use our communication resources effectively.

We also include the results after the first project period in the next table for comparison.

Metric	Explanation	Goal for the total project duration from the DoA	Baseline (end of e-IRGSP4 November 2016)	Result at the end of period 1 (November 2017)	Goal at the end of period 2 (November 2018)	Result near the end of period (15 November 2018)	Comment
Unique visitors e-IRG website/month	A standard metric which is widely used and well-known	2.000	5.000	18.000 (In September and in October 2017) 7.000 (December 2016)	5.000	10.000 (October 2018) 14.000 (May 2018)	Fluctuations from month to month, but on average not below about 10.000. So OK
Unique visitors KnowledgeBase website/month	A standard metric which is widely used and well-known		1.600	4.000 (In September and October 2017)	1.800	3.400 (October 2018) 3.800 (May 2018)	Stable numbers. So OK.

Number of views on Vimeo/mont h	Channel with presentation videos. The video interviews are at another channel	Mentioned as metric		88 (October 2017)	80	99 (October 2018)	It varies a lot, there are months with very few views and months with high view numbers. Related to whether we publish new material and Tweet about it.
Workshop visitors		Mentioned as metric		Number of participants for the workshops in Slovakia, Malta, and Estonia, are 58, 68, and 67.		Number of participants for the workshops in Sofia: 90. Preliminary number for Vienna: 67.	Organised and counted by WP2
Mentions of e-IRG or e-IRG work		Mentioned as metric		About 25	25	About NEED TO CHECK	Including mentions in news magazines, in reports and other documents.
e-IRG mailing list reach		2.000	1.820	1.839		276	Organised and counted by WP2. Issues with GDPR.

3.3 Contribution to assessing the impact of the e-IRG

To assess the impact of the e-IRG we performed a detailed advanced search on Google – the search is too big for DuckDuckGo – to find a first selection of possible interesting mentions that could potentially be related to the impact of the e-IRG. In most cases these are reports, deliverables, roadmaps and the like.

We ran the following Google search and restricted it to one year:

"e-irg" -site:e-irg.eu
 -site:vimeo.com
 -site:youtube.com
 -site:twitter.com
 -site:e-irg.org
 -site:surveymonkey.com
 -site:genias.nl
 -site:www.man.poznan.pl
 -site:www.belspo.be
 -site:dastelefonbuch.de
 -site:pdffiller.com
 -site:garr.tv
 -site:facebook.com

Copy the complete text in the search field, Please note results may and will vary when you rerun Google searches.

We were left with 80 links that we followed and investigated the contents of the linked page or document. Documents were found in several European languages. This led to an additional 14 documents that used e-IRG material or recommendations, additional to the ones that we had already found through direct contacts.

For details of a number of the important mentions we refer to the full Dissemination list.

Some of these 14 documents are indicated with the categories "Paper" and "Other" in the list; "Genias" is indicated as responsible partner, although the responsibility is limited to searching and finding the reference.

e-IRG work and activities have been picked up internationally:

✓ At the AXIES 2017 Conference - Academic eXchange for Information Environment and Strategy, in December 2017 in Kyoto, Japan, Miho Funamori from the Information and Society Research Division, National Institute of Informatics in Japan mentioned e-IRG in her presentation titled "The World-wide Trend towards e-Research Infrastructure - Will it be the key factor for S&T international competitiveness?"

✓ Joshua Borycz from the University of Tennessee - Knoxville, College of Communication and Information, 302 Communications, 1345 Circle Park Drive, Knoxville, Tennessee, USA and Bonnie Carroll from CENDI, c/o Information International Associates (IIa), 104 Union Valley Road, Tennessee, USA mentioned e-IRG in their paper titled "Managing Digital Research Objects in an Expanding Science Ecosystem: 2017 Conference Summary".

✓ Fernanda Passini Moreno from the University of Brasilia and the University Carlos III in Madrid, Spain mentioned e-IRG in her paper titled "Repositórios de dados de pesquisa na Espanha: breve análise", issued by the Universidade Federal de Santa Catarina, Brazil.

The e-IRG has been mentioned in three peer-reviewed papers:

✓ Ferrari T., Scardaci D., Andreozzi S. (2018) The Open Science Commons for the European Research Area. In: Mathieu PP, Aubrecht C. (eds) Earth Observation Open Science and Innovation. ISSI Scientific Report Series, vol 15. Springer, Cham.

https://doi.org/10.1007/978-3-319-65633-5_3

✓ Borycz, J. and Carroll, B., 2018. Managing Digital Research Objects in an Expanding Science Ecosystem: 2017 Conference Summary. Data Science Journal, 17, p.16.

<http://doi.org/10.5334/dsj-2018-016>

✓ Fernanda Passini Moreno: Repositórios de dados de pesquisa na Espanha: breve análise. *Encontros Bibli: revista eletrônica de biblioteconomia e ciência da informação*, v. 23, n. 53, p. 52-63, set./dez., 2018.

4 Knowledge Base

4.1 Introduction

The e-IRG Knowledge Base provides factual information about e-Infrastructures and related areas such as HPC and Research Infrastructures with a strong IT component. It is intended to be used by for instance the e-IRG in their policy making process. It is an element of evidence based policy making.

The facts, compiled by the Knowledge Base are taken from many Internet based sources. We use reliable primary sources only. For instance when looking at who is member of the PLAN-E organisation, we go to the PLAN-E organisation's presence on the Internet.

To be able to present more than just lists, we use knowledge management techniques to be able to represent the information gathered from these many sources in such a way it can be combined. For instance an organisation like "Forschungszentrum Jülich" participates in projects as a partner, houses supercomputers and is national node of several international organisations. We try to capture that automatically. The way we do that is by using unique identifiers for topics. The Forschungszentrum Jülich for instance has a

specific partner code in European projects, that uniquely identifies the organisation. The centre also has another, unique code in the TOP500 list. And it has a unique domain name on the Internet: <http://fz-juelich.de/>. By aligning these three, we can collect a lot of information about the centre.

The automatic tools do a good job. However for humans it seems some of the collected information could be easily improved. For instance for the Jülich centre, there are (at least) three different names used on the Internet: "Forschungszentrum Jülich", "Forschungszentrum Juelich (FZJ)", "Forschungszentrum Julich Gmbh". We just collect these names as "facts from the Internet".

The content of the Knowledge Base changes over time, because the content of the sources changes over time. We do not maintain archives.

During the past year we made a lot of changes and updates to the Knowledge Base. We will start this section with an overview of the main improvements. Then we continue with showing what is available and how the content can be browsed. We conclude with a technical summary of the Knowledge Base.

The main entry to the Knowledge Base is: <http://knowledgebase.e-irg.eu/>

4.2 Improvements in the Knowledge Base

The Knowledge base is developed in a timespan of over a decade.

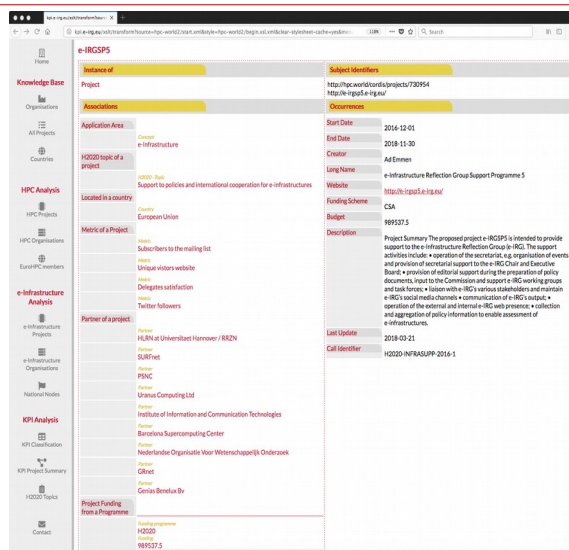

During the past year we did a full check-up of the Knowledge Base, bringing it on par with current state-of-the-art. Most important parts that were tackled:

- Browsing interface
- Better use of Identifiers
- Streamlining back-end

Browser technology and Cascading Stylesheet (CSS) have developed a lot over the years. We now used the latest CSS in the Knowledge Base front-end.

As explained before, we frequently use persistent identifiers in the Knowledge Base. We have completely renewed the way that we handle these. Especially we now use in a systematical way identifiers that are defined by organisations in a persistent way and that are publicly available.

Over the years, we have used a lot of technologies in the back-end of the Knowledge Base and several ways to represent data. This has been streamlined to a small extent.

Start Date: 2016-12-01
End Date: 2018-11-30
Creator: Ad Ennen
Long Name: e-Infrastructure Reflection Group Support Programme 5
Website: <http://www.e-irgsp5.eu/irgsp5/>
Budget: 999375
Description: Project Summary: The proposed project e-IRGSP5 is intended to provide support to the e-Infrastructure Reflection Group (e-IRG). The support activities include: • operation of the secretariat, e.g. organisation of events and provision of secretarial support to the e-IRG Chair and Executive Board; • provision of editorial support during the preparation of policy documents, input to the Commission and support e-IRG working groups and task forces; • liaison with e-IRG's various stakeholders and maintain e-IRG's social media channels; • communication of e-IRG's output; • operation of the external and internal e-IRG web presence; • collection and aggregation of policy information to enable assessment of e-Infrastructures.

Organisations most involved in e-Infrastructures.

4.2.1 What has not changed, yet

Two parts of the Knowledge Base have not changed:

- The document library
- The Calendar of events

The document library is still based on Liferay technology. Integrating with Topic Maps has not been completed. However, there have been many documents added to the Knowledge Base section. The section on National research Infrastructures <http://knowledgebase.e-irg.eu/national-road-maps-research-infrastructures> has been improved as well.

4.2.2 Browsing interface

The interface provides an overview of all the topics and relations inside the Knowledge Base graph. So you can click on topics, see the relations (called associations in Topic Maps) and click on them to see the related topics. Every topic also can have several Properties (called occurrences). We try to hide very specific Topic Maps technical terms from this view.

The current browser view contains four main menu headings (on the left of each page). These are provided as main starting points for users to allow them to enter the graph database. The

menus reflect the main points of interest to the e-Infrastructure community today. So they will change in the future.

The “Knowledge Base” menu shows a list of organisations active in the area. This includes partners of H2020 projects, and HPC centres with TOP500 supercomputers. The “all projects” submenu lists all projects in the area. Currently only H2020 are included. Through the country submenu one can drill down to the information related to each European country.

The second menu on the left side “HPC Analysis” shows some useful overviews related to HPC. With the developments around EuroHPC, there is a lot of interest in information about HPC in Europe.

In “HPC projects funded under Horizon 2020: we give an overview of all HPC related projects that are funded under Horizon 2020. This includes projects for specific HPC topics, but also HPC projects funded under other parts of H2020. Because we use here mainly the data from the European Open Data portal, the very latest projects are not always included yet. The Open Data portal sometimes lags a bit behind the contracts that already have been signed.

The list “Organisations with most funded H2020 HPC projects” lists the organisations with most funded HPC projects. We cut off the list at 5 projects. In the current list there are 35 organisations with 5 or more projects.

The EuroHPC members item provides a list of the countries that are member of the EuroHPC Joint Undertaking. From the list one can click further down to country details.

The e-Infrastructures menu section provides three useful lists as entries into the e-Infrastructures world:

“e-Infrastructure projects funded under Horizon 2020” lists all the funded H2020 projects. As some projects are both HPC and e-Infrastructures related, there is some overlap with the list of HPC projects. We also show the project budget for each project in the list. The individual project page gives much more information.

The “Organisations with most funded H2020 e-Infrastructure projects” lists the organisations in Europe that participate in at least 5 e-Infrastructure projects. There are 50 listed, which is more than under HPC. Also the number 1 on the list has fewer projects than the one on the HPC list. This shows the e-Infrastructure

community is broader than the HPC community (measured in number of projects).

One of the topics of interest for the e-IRG (and the e-Infrastructure community) is the proliferation of international organisations in e-Infrastructures and related research infrastructures that have national nodes with many European countries. We list from 20 organisations the countries and in the country the organisations that act as national nodes of international e-Infrastructure related organisations.

The section on KPI analysis is explained in Deliverable D4.2 *Report on the retrieval, provision and analysis of cost-related policy information*.

The front end interface is a browsing interface only. There is a very simple facility that allows to reference each topic in the Knowledge Base if you know the subject identifier of the topic.

For complex querying Topic Map query tools, or XML based query tools can be used on the back-end.

4.2.3 Better use of Persistent and Unique Identifiers

For persistent identifiers we look as much as possible for identifiers that are assigned by an authoritative organisation. The country codes defined by ISO are one example. For European projects we can base our identifiers on the ones that the European Union uses.

Please note that within Topic Maps, all unique identifiers are represented as URIs. So for instance we represent “Germany” with ISO alpha-2 code “DE” as

<http://www.topicmaps.org/xtm/1.0/country.xtm#DE>

Because it is just a representation of a standard identifier, it is easy to map it onto another representation of the same identifier.

For parts of the ontology where there is not an authoritative authority, we define permanent identifiers ourselves. Topic Maps provides provisions to easily do that. In general the naming convention is simple; either it follows the ontology, or it is just a plain numbering scheme. Our ontology (taxonomy, classification), represented as a Topic Map, is the main reference.

Identification of H2020 projects

For European Union funded projects, we use the contract code assigned by the European Union as unique identifier. So for example H2020 & 730954 uniquely and persistently define the e-

IRGSP5 project. There are many projects that use the same name or acronym, so a project name itself cannot be used as identifier.

Another unique identifier for a project is the domain name owned. So for instance <http://einfracentral.eu/> uniquely identifies the eInfra Central project. Note this is an identifying URI only. There does not really exist a website on that URL. Please also note that this identifier is not as unique as the contract code. There are many domain names of previous projects that are not owned by any of the previous partners.

This type of identifier, however, is useful to automatically couple project data with other linked open data.

Identification of organisations

As unique identifier for organisations we can use as much as possible the same approach again, i.e. the code assigned by the European Union programme and an organisation specific URI. However, to assure uniqueness and persistence, often an additional identifier has to be assigned: organisations come and go, merge, split, etc.

4.2.4 Streamlining backend

Under the hood of the Knowledge Base a lot of things have been streamlined and improved during the past year:

- Streamlining processes.
- Enable reuse of programme snippets
- Improved XSLT transformation sheets
- Better support for front-end

The processes are described in a bit more detail below. One of the improvements is to enhance the reusability of programming and scripting snippets. This includes for instance automatic Subject Identifier determination from URLs and better intermediary formats.

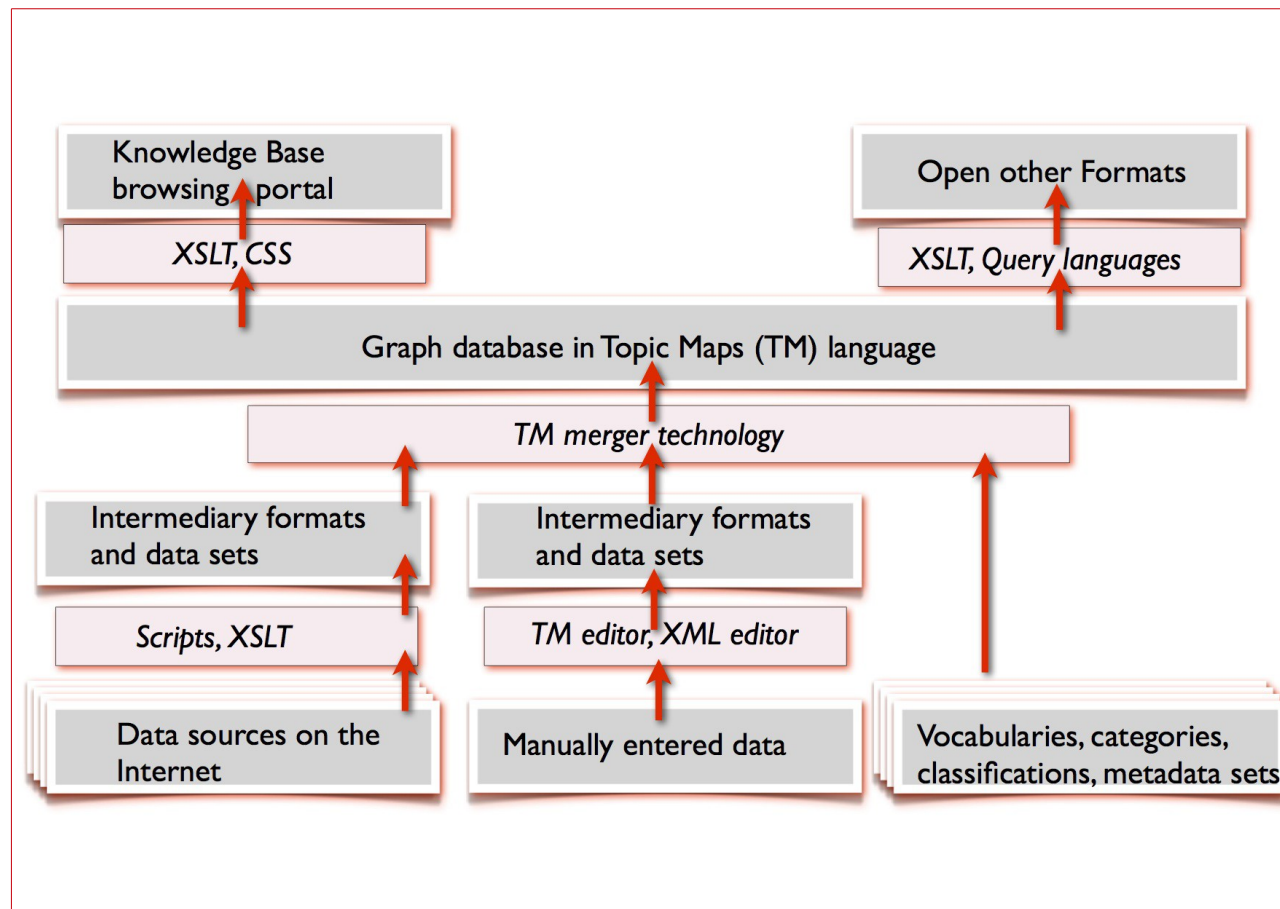

We still use XSLT as our main programming language. Together with Xpath it provides enough functionality to extract information from a number of XML documents and output

for new XML documents, HTML pages or JSON data. We made several improvements to our sets of XSLT transformation sheets. A major improvement is that we reexamined them all for performance.

The new browser interface is still embedded in the “old” Knowledge Base website. But we made it easier to also include the Knowledge Base in other websites with a different front page and leaving out menus when needed. For instance <http://e-irg.eu/kpi-collection> starts with KPI collection information embedded in the overall <http://e-irg.eu> website.

4.3 Technology summary

Data are as much as possible collected as Linked Data. The “permanent part” of the Knowledge Base consists mainly of scripts that do the linking, extracting, and cleaning, and tools for representation of the data. The processes we follow are taken from data analytics (as used by companies for instance) and data journalism. We are not part of a scientific process: i.e. we do not strive for scientific publications with our work. We do not store data indefinitely but provide a window on currently useful information. It is a window that is moving over time. The current size of the Knowledge Base is between 20.000 – 25.000 items (Topics, Associations and Occurrences).

4.3.1 Overall process for external data sets

1. Get (representation of) the external dataset. Preferably we are looking for

XML based data. But often only HTML, or even just PDF is available.

2. Create a temporary dataset with only the interesting information. Intermediate XML

format useful both for understanding the content and for further processing.

3. Use helper sets and helper metadata sets to enrich the temporary dataset with

identifiers for topics. Also do some data cleaning.

4. Generate a graph representation (Topic Map) for each data set. Steps 1 – 4 are done for each external data set.
5. Merge all the individual Topic Maps into one: This merged topic map, also is the actual Knowledge Base
6. For each usage generate a temporary usage Topic Map or other XML representation. This temporary usage data set can contain for instance projects lists, or lists of organisations in a specific area.

7. The temporary usage data sets are displayed on web pages and the like. This is the representation of the Knowledge Base that most people see.

We also look whether micro-metadata is available on external websites, for instance Open Graph Protocol (<http://ogp.me/>) or <http://Schema.org>. Unfortunately, these are not widely used in the e-Infrastructure community so we have to use HTML crawling.

4.3.2 Some of the tools used

As do most Knowledge Managements systems we also apply a wide variety of tools. These include:

- Web crawlers: Curl, Wget, Phantom, RSS
- Natural Language processing tools: Stanford NLP, also XSLT
- General tools: XSLT, XQuery, Apache Web server, Apache Tomcat, NodeJS, Python, Julia, scripting
- Topic Map specific tools: Ontopia, Wandora
- Document library tools: Liferay (<http://liferay.com>)

Most of these tools are well known in the IT world, so we will not describe them in detail in this deliverable.

4.3.3 Data Sources

Data source	Why we want it	Where we get it	Original format	Uses intermediary XML format
H2020 project information	Projects are a fundamental way of financing e-Infrastructures and developments in the field. Including partner and Topic reference information	European Open Data Portal	XML	
H2020 Topic detail information	The actual funding goal of specific e-Infrastructure	Cordis Website	HTML	yes

	projects in H2020. Used in KPI analysis			
TOP500 list	HPC in Europe. Relevant for the HPC part of e-Infrastructures	TOP500 list website	XML	
Geant Compendium	Contains information relevant to the network part e-Infrastructures. Also included for the KPI analysis		HTML	yes
LEARN definitions	For the KPI analysis		PDF	yes
H2020 Communication activities	Standard classification used by all H2020 projects. Also used in KPI analysis	H2020 participants portal	HTML	
ISCO Country codes	To uniquely identify countries.	ISO portal	HTML	
Individual organisations Organisations: <ul style="list-style-type: none"> ➤ ECMWF ➤ SKA ➤ CERIC ➤ SHARE ➤ EATRIS 	National nodes of e-Infrastructures are at the core of European wide e-Infrastructures. We collect data from international infrastructures national organisations.	From individual websites.	HTML	yes

<ul style="list-style-type: none"> ➤ DARIAH ➤ EMSO ➤ RDA ➤ EuroHPC ➤ BBMRI ➤ ELXIR ➤ OpenAIRE ➤ EGI ➤ PRACE ➤ PLAN-E ➤ EUDAT 				
---	--	--	--	--

Data sources not (yet) integrated in Topic Maps

Data source	Why we want it	Where we get it	Original format
Document Library	Reference documents for e-Infrastructures	We create this ourselves	We use the Liferay Document Library system
Calendar of events	Inform about (upcoming) events	We create this ourselves	XML format

Helper files

File	What it contains	Why we need it	How we get it	Format	Excerpt
e-INFRAandHPC	H2020 Topic Codes	To select which of the	We take the Topics file	XML	<topic type="einfra, hpc,

Topics.xml	annotated with infra, hpc, researchinfra"	over 20.000 H2020 projects belong the areas we are interested in.	from the H2020 data on the Open Data Portal and annotate it manually. Because the Topic Codes never change that is an effective method.		<pre> researchinfra" > <RCN>700793</RCN> <CODE>EINFRA-11-2016</CODE> <Title>Support to the next implementation phase of Pan-European High Performance Computing infrastructure and services (PRACE)</Title> <language>en</language> </topic> </pre>
MappingPartnerNames.x tm	It maps names of partners in H2020 programmes to Subject Identifiers.	This way we can link data from several sources to one organisation that is partner of a H2020 project.	Manually. (New way would be to link the partner PIC code instead of the name).	Topic Maps, XTM 1.0	<pre> <topic id="idincludel78"> <instanceOf> <topicRef xlink:href="#id9"> </topicRef> </instanceOf> <subjectIdentity> <subjectIndicatorRef xlink:href="http://prace-ri.eu/"></subjectIndicatorRef> </subjectIdentity> </pre>

					<pre> <baseName> <baseNameString>PARTNERSHIP FOR ADVANCED COMPUTINGIN EUROPE AISBL</baseNameString> </baseName> </topic> </pre>
Mapping.xtm	It maps names of projects in H2020 programmes to Subject Identifiers.	This way we can link data from several sources to one H2020 project.	Manually. (New way would be to link the partner PIC code instead of the name).	XML	<pre> <project> <identifier>http://epigram- project.eu/</identifier> <acronym>EPiGRAM</acronym> </project> </pre>
HPC-projects- references.xml	Projects that do not belong to a specific HPC H2020 Topic, but still are despite being funded from another Topic.	To be able to identify all HPC related H2020 projects.	Manually	XML	<pre> <project- reference>687628</project- reference> <project- reference>688540</project- reference> <project- reference>687628</project- reference> </pre>

4.3.4 References

Standards of (meta)data specifications used

Extensible Markup Language (XML) 1.0 (Fifth Edition)

<https://www.w3.org/TR/2008/REC-xml-20081126/>

Note 1: There is a version 1.1 which is hardly ever used because it solves a problem that does not really exist in today's systems.

Note 2. There are a number of basic helper standards of which only "Namespaces in XML 1.0 (Second Edition)" <https://www.w3.org/TR/2006/REC-xml-names-20060816/> is widely used.

Topic Maps

ISO/IEC 13250:2003 Information technology - SGML applications - Topic maps
<https://www.iso.org/standard/38068.html>

Note 1: Our main ontology language. There are alternatives like RDF/OWL, but we use Topic Maps in the Knowledge Base since the beginning of time.

Note 2: There are two versions of the standard, which are interchangeable in the data abstraction. The oldest version XTM 1.0 used Xlink. Xlink never got widely used. So it is also abandoned in XTM 2.

Country Codes

We use the Alpha-2 code of ISO 3166
<https://www.iso.org/iso-3166-country-codes.html>

Note: The EU uses a set of codes which differs slightly from the ISO set.

5 Conclusion

6 What are we talking about?

7 Appendix A - Complete cumulative list of communication/dissemination activities

Activity	Medium/Event	Start Date End Date	Place Country	URL	Partner	Type	Audience
Significant funding is given to the #EOSC disciplinary cluster projects and thus strong synergies are needed with the horizontal #EOSC projects on building skill sets and developing/using services around #OpenScience #FAIRdata to connect and use #EOSC #EOSCstakeholderforum	Twitter	2018-11-22	Vienna Austria	Link	Uranus Computing Ltd.	[Twitter][H2020 - Social Media]	[Scientists (users)][H2020 - Policy Makers][H2020 - Scientific Community (Higher Education, Research)]
Arjen van Arjen presented the preliminary findings from the @eirgeu national nodes working group and related questionnaires answered via #eirg delegates. Good practices-recommendations towards national einfra Commnos to ease #EU integration is the expected outcome #EOSC #eu2018at	Twitter	2018-11-21	Vienna Austria	Link	Uranus Computing Ltd.
